RECRUITMENT AND EDUCATION SUPPLEMENT

Should the poachers pay a transfer fee?

by John Riley
COMPANIES that poach staff should compensate the companies that trained them. That was one of the viewpoints put forward by computer services companies which took part in a recent survey of training needs for the industry.

Over 1,600 computer services companies were canvassed by the survey, conducted by the Computing Services Industry Training Council (Cosit) this summer.

The response identified that there is a strong need for training in all areas except for computer operators and data preparation staff. It also unexpectedly revealed a particularly urgent need for more training in sales and marketing.

"We know how to train analyst programmers but we don't know how to train computer sales people," said Cosit's director, Gordon Ewan, who was formerly a training manager at ICL.

"The Computing Services Association's annual report has already said that the pay factor for growth in the industry is the

shortage of trained staff, and our survey has uncovered key shortages in marketing and selling. There is also a shortage of trainers too, skilled people with the ability to communicate their knowledge.

"A lot of unsupported facts and figures about employment needs are regularly banded about in the

Cosit currently administers grants for companies to train either new or existing employees on behalf of the Manpower Services Commission. This year it has £600,000 available under its Training and Development Fund with a limit of £750 per trainee, and with no one company being

The most rapidly expanding area revealed by the survey were sales staff, applications programmers and field maintenance engineers - over 60% of companies employing these categories predicted expansion of these sectors.

Around 50% of those companies employing consultants, operation support staff and systems analysts and programmers predicted expansion of their needs in the future.

Although 62% of the companies expected to increase their staffing of applications programmers, 9.8% actually predicted that they would shed staff. A decline in operation support staff was predicted by 7.4% of the companies and 5.2% predicted a drop in their need for systems analysts and designers.

Two thirds expected to expand their training in the non-administrative sectors.

Ewan was disappointed by the response in the survey: of the 1,600 computer services com-

puter industry," he said, "but there are not many answers. Therefore we decided it was time to analyse the situation systematically."

"The survey illustrates the classic dilemma," he continued. "Large companies train staff from scratch and other, smaller ones, which have no intention of training new entrants, live off their backs."

allowed more than 30 grants.

One of the ideas to solve the poaching problem given by respondents to the Cosit survey was to introduce a transfer fee, or a levy to make the poachers reimburse part of the training costs.

"A transfer fee, like you have in football, is attractive," said Ewan, "but would be impossible in practice."

EWAN... "A transfer fee is attractive."

Ewan believes that the money best spent helping to provide short, intensive periods of training combined with on the job reinforcement. At present he only has £600,000 to spend doing this, though there is a possibility of further £75,000 being granted by the MSC later this month.

CSA prepares for new Euro attack

by John Kavanagh
THE UK computing services industry is gearing up for a major assault on Europe following the election of BIS chairman Roger Graham to a top job in the European Computing Services Association.

Graham's appointment as vice-president for two years comes just as the UK Computing Services Association is planning new initiatives to get UK firms into Europe. It also coincides with new aggression from the French services industry, which is campaigning for more government backing for export efforts (see page 4).

Graham, chairman of BIS' computing companies, is on the UK CSA's international marketing committee, which is determined to make its mark in 1984.

"Last year European services

business totalled \$8,100 million while the US market was \$26,400 million - yet the total gross national products are roughly the same," Graham said. "This means there's a lot of potential business to be done in Europe."

The UK's share of the European market was \$1,500 million. Graham said UK exports to Europe had fallen in recent years because it was easier to sell to the US, where there were no language problems.

CSA members probably have more people in the US than in Europe," he said. "A lot of companies have over 100 staff in the US - but very few have that number in Europe."

He added: "UK people and products have a good reputation in Europe - but the number of products sold is not that great."

Clive Telfer, chairman of the CSA's international marketing committee and a director of systems firm AIM, said: "There's always been a CSA committee looking at exports but it's been passive. But now there's new impetus from members."

Telfer's committee also includes Secon managing director Warren Werblow.

"Through the committee small firms can talk to experienced people like Roger Graham and Warren Werblow," he said. "We will help them by giving an insight into what is involved in exporting and government support."

Other issues Graham will campaign on include telecommunications, data protection legislation and software copyright. He said there was a lot to do on the communications scene.

GRAHAM... Companies have staff in US rather than Europe.

ITT chases IBM personals

US MULTINATIONAL ITT is going after IBM in the personal computer market. At next week's Comdex show in Las Vegas it will unveil ITT XTRA, an 8088-based micro which will run MS-DOS and much available IBM PC software. Prices should start around \$3,500. ITT has already experienced the business micro market with its 2020 and 3030 machines.

Tymshare bid

GIANT US aircraft manufacturer McDonnell Douglas is set to buy ailing computer services company Tymshare for between \$360 and \$420 million. The aircraft company's computer subsidiary McDonnell Douglas Automation has the largest civil computer installation in the world and a commercial turnover of over \$300 million a year.

Natural grant

STANFORD University in California has been given a \$21 million research grant to develop natural language links to computers. The grant, one of the biggest yet made for an artificial intelligence project, comes from the US System Development Research Foundation, and goes in a team of leading US academics headed by Professor Jon Barwise of Stanford University.

Record breaker

RECORDS were shattered for attendance at last week's Compec, the UK's major annual computer industry show. The figure leapt 14% to 37,342. Around 500 companies, over 50 of them in Software Village, exhibited at the UK computer industry's marketplace, which is sponsored by Computer Weekly.

Hero jumps on IBM bandwagon

by Keith Holder
SMALL systems and communications specialist MDS last week jumped on the IBM network bandwagon with its own personal computer, the Hero, and a family of communications processors.

"IBM has focussed the market for us," said Gerry Meredith-Smith, MDS UK managing director. "What we are offering is a superior product at a cheaper price."

The new machines will support the company's existing software, and are designed to give users access to IBM host computers for running applications programs. The 16-bit Hero uses high-level languages like Basic and Fortran, and offers graphics, extended disc storage and optional full colour. It runs the company's H/O operating system.

MEREDITH-SMITH... "Superior."

In use with this network at three million.

Company president Robert Amos said that IBM's 3270 personal computer is a clear sign that office automation will evolve from the 3270 network. "We will be in a position to supply our customers with high performance machines in this environment," he said. "Independent estimates put the market for non-intelligent terminals

US bars Silicon Valley to Soviets

by George Black
THE computer Cold War froze harder last week when the US State Department made Silicon Valley a no-go area for Soviet citizens and diplomats.

The Russian Embassy in the United States was sent a new map of restricted zones that includes Santa Clara County, California, where many of the high technology start-up firms are concentrated.

"We've been trying ever since 1941 to convince the Soviet that travel controls are not in their interest or ours. Our move is a response to their revised list of restricted areas and correspondences closely to it."

American fears of technology espionage have been intensified with the seizure by West German and Swedish customs of two DEC Vax-11/782 microcomputers bound for the Soviet Union. One was intercepted at Hamburg on a tip from West Germany-based US

officials, the other slipped through from there to Sweden, but was halted at Helsinki.

They are thought to have been shipped by a New York firm to its South African affiliate. The South African authorities say they are mounting an inquiry with American help. One report states it centres on a West German dealer named Richard Muller.

The Vax is on the US controlled exports list and needs a special licence to leave that country.

But European governments view the seizures as showing a heavy-handed and unselective approach to the problem of preventing the eastern bloc from gaining military know-how.

An official of the British Trade and Industry Department said that the Americans would not even listen to their allies on trade policy now.

Several UK industry experts argue that the Soviet aim would not be to capture complete systems from West Germany-based US

for "reverse engineering", but to buy chipmaking equipment. A more serious instance occurred last year with the alleged disappearance in Paris of one such tool, a Perkin-Elmer Micralign.

You ask the questions...
FQS-Friendly Query System
For IBM Mainframes
...provides the answers

Online queries for end users

Immediate answers to ad-hoc queries easily available to end users at their online screen. No programming needed and no special skills required as FQS helps end users with simple menu choices and prompting throughout the online enquiry. DL/I databases supported directly allowing immediate access to live data. All existing data on your system is accessible by FQS in CICS/VS, SHADOW II and stand-alone versions. Is your technical career progressing?

Our sustained heavy investment in modern technology includes IBM/Amdahl mainframes, Wang VS, Series I, System 34, Micros, POS networks, Viewdata and communications. On the mainframes we run MVS/SP and VM/SP plus CICS and IMS. We are committed to a substantial program of expansion for both new and existing products. Our growth could be your career progression.

What we can offer

We are a member of an expanding £460m British Group with a proven international track record in the leisure and communications industry. Active career development provides for regular appraisal, training, transfers and promotion from within based on individual merit. The benefits include competitive salaries, 4/6 weeks holiday, flexitime, and other large company benefits plus full relocation.

<p>MINI PROGRAMMING TO £8,600</p> <p>For a career in a new, growing industry, join our team. We offer a competitive salary, excellent benefits, and a challenging environment. Apply now to: Granada Computer Services, PO Box 31, Ampthill Road, Bedford.</p>	<p>MICRO DESIGN TO £10,650</p> <p>Join our team and work on exciting microcomputer projects. We offer a competitive salary, excellent benefits, and a challenging environment. Joseph foresees train cells on a chip.....6

Microdata is a McDonnell Douglas company

by Nuala Moran

Each company takes a basic offering and adds the necessary

Manufacturers have belatedly found out that it is software that sells hardware. This explains the recent agreements of IBM with

The requirement for different skills and knowledge means that all companies need to have a sub-contractor capability. Gibbens said: "We need to be like the civil engineering industry. The industry doesn't have the breadth of disciplines it needs to solve every problem so it has to go out and find them."

Dellis says: "There is still a strong preconceived idea that only hardware can be sold abroad. However, by 1990, software's share of costs in computer systems will account for 90% of the total cost."

Dellis stressed that France's software industry is not seeking cash aid from the government but was only asking it not to put spoke in the wheel of computer service suppliers.

Comparable figures for electronic engineering are not available. "Universities mi-

spokesman. But as yet we have not received any reply."

The individual companies are due to meet on December 12.

Is an electronic brain imminent?

by John Riley
BRAIN cells on a chip could be the logical outcome of the impending marriage between biotechnology and computer technology. That was one of several futuristic views put forward last week by computer industry prophet Earl Joseph.

Speaking at the annual Pergamon Infotech state of the art review in London, Joseph argued that nature has already solved the problems of packing extremely high level integration into DNA enzymes, and that computers can use those circuits even though we do not understand yet how they work.

"By cutting out the brain part of DNA and defining it as one bit of memory, you can reach the smaller memory needed to get self-manufacturing for intelligent systems without learning first how to design it," said Joseph, who is president, planning and development for the US consultants

Antipatory Sciences Inc.

He claims that there are unlimited possibilities. "An example is that at present image recognition is not efficient with computers - but if you could cut and splice that part of the DNA code which deals with image processing and put it in a robot, it would solve the problem. Biochips, or monoclonal antibodies, would enable you to grow computers rather than manufacture them."

Joseph, who formerly designed computer systems for Sperry, points out that the US military is very interested in biotechnological research.

As well as looking to the more distant future of bio-chips, Joseph sees present dangers in "computer wars" and in Luddism by DP managers.

"The real danger to the computer industry in the US from Luddites is from people who manage the computers and not the users," he warned.

"Data processing managers are getting frightened because there is a lot of de-skilling going on. It's slowly dawning on them that they are no longer supplying computer power and services - they are switching to becoming consultants."

The Luddism going on at present is both at the sophisticated level and also at the "axe to machine" level, he said.

The wars he talked of are the war with Japan; the war being waged on everybody by IBM, especially since its release from the US anti-trust suit; and the war in the microcomputer world.

However, Joseph did not offer only gloom and doom. He pointed out that the future is nearly upon us, with first steps already being taken to produce smart machines, talking and listening chips, computer systems on a wafer, and applications programs on a chip.

JOSEPH... "Luddite managers are the real danger."

CAP buys itself some education

by George Black
UK SYSTEMS house going into educational buying \$100,000 worth of Applied Systems Kase West London.

ASK, which develops for micros in schools, extra shares to give CAP stake in its operations, give up any existing CAP's business director, Harley Elson, will have seat on board. But Atkinson only be helping them policy, not taking over day running of the company.

He said he anticipated national software would great deal faster than in general over the next year. "We've only been on surface up to now," he said. ASK is expected to £500,000 during 1984, whole market sector could Million next year.

ASK has had exports to US and New Zealand, Africa, the United States and Far East.

Zygal steps into the OEM unknown

by Claire Gooding

A MULTI-MILLION dollar agreement with US manufacturer Convergent Technologies is bringing UK printer and communications specialist Zygal Dynamics into new territory.

Zygal is entering the OEM business, "adding value" to Convergent Technology N-GEN machines with its own communications and print products.

Zygal is hoping to get in on the boom area of distributed processing. "We are looking for users who want networks at a personal computer price," explained Desmond Flynn, managing director of Zygal Dynamics. "Typically, the people who are after a 10 or 15 personal computer clustered workstation would be interested in the kind of system we will be building."

The company regards the agreement with Convergent as "quite a coup" since its hardware is also OEMed by Burroughs, Prime, NCR and Gould-SEL.

Zygal plans to build "turnkey hardware", matching the specific requirements of customers by adding various other products to the N-GEN. It will address its familiar territory of banking and financial users, but also look further afield,

hoping to take advantage of lively interest in distributed processing triggered off by own Personal Computer.

One of the unusual features of the N-GEN's native CTOS operating system is its ability to run 15 or so concurrent systems MS-DOS and CP/M multi-tasking systems, in the same C/P/M or MS-DOS callouts but running only one and one printer.

"There's been a lot of interest in Concurrent C/P/M and multi-tasking, and people have been about MS-DOS having capabilities. Effectively, there already with CTOS Flynn.

CTOS handles the display such a way that several users be accessing a single without being aware of each other. It is effectively a "driver" for peripherals, while the user is only aware of using standard C/P/M or MS-DOS. Zygal, which took over McNulty's communications and Modular Technology when it crashed last year, is putting emphasis on communications in the new venture.

Micro Eclipse fills gap

by John Riley

US MINICOMPUTER manufacturer Data General this week brought its new micro-Eclipse based system to Europe. Launched last week, the C/30 is designed to fill the gap between its 16-bit microcomputer and its MV4000 minicomputers.

The system is a commercial version of the S/20, but also offers a commercial instruction set, floating point accelerator and micro burst multiplex channel.

The C/30 is a 16-bit system which supports from five to nine users, and offers up to two Mbytes of main memory and 150 Mbytes of disc storage.

It runs all Data General's software, including the AOS (Advanced Operating System), RIOS (Real Time Disc Operating System) and MP/AOS (Multi-Programmed Advanced Operating System) and also the Comprehensive Electronic Office.

Information systems. "Primarily information systems in large organisations, for use in applications such as inventory management and secondly, for the small business user who traditionally bought the CS range in the 1970s."

The price for a typical configuration, including the C/30 with half a Mbyte memory, 50 Mbytes disc, cartridge tape back-up multiplexer, console, Microburst and operating system license together with software credits is £27,016.

The entry level half Mbyte C/30 processor alone is £8,240. Deliveries are expected to begin in February.

Data General also intends to back IBM document interchange standards. It also offers Document Content Architecture (DIA/DOC) on its CEO when they are published.

Last week Data General announced that it has agreed to develop interfaces with three IBM manufacturers, including the K/30 in the UK.

Northern Telecom, the great all-rounder in DDP and communications

Distributed Data Processing is our business; communications our strong-point.

When you choose a Northern Telecom DDP system you're also getting a telex, terminal, wordprocessor, mail-box - you name it. And you're getting closer to the automated office.

Compatibility is our watchword - from hardware, software and communications, to the way you use them. Our versatile range of systems allows you to build and develop a network to suit your needs and run your business more smoothly and efficiently.

The common operating systems gives you free movement of resources around the network. Thanks to our computer expertise and telecommunications know-how, you can communicate both inside and outside your organisation - without leaving your desk.

Northern Telecom is one of the world leaders in this field, with vast resources. We design and manufacture our equipment, and back it with software and support services close at hand throughout Europe. You can depend on our commitment to your growth.

So if you want a professional DDP system, and you feel the urge to communicate, start talking to us.

Northern Telecom Data Systems Ltd, Arden Grove, Harpenden, Herts AL5 4UD. Tel: (05827) 63161. Telex: 825334.

Where computers and communications meet

Telecomms is on a collision path

by John Riley
THE fast-moving computer industry is about to collide with the plodding telecommunications industry, and a shake-up is inevitable.

That view was put to Pergamon Infotech's annual state of the art conference last week by John Burroughs, head of information systems at the Rutherford Appleton Laboratory.

"The telecommunications industry has not kept pace with the computer industry," he said. "The computer industry is in excellent shape, but although communications has spectacular technology, it is not so healthy organisationally."

The question is: will communications providers supply all the equipment to go on the end? That is difficult for a State monopoly: they either keep communications suppliers holed in or let them

compete, in which case they lose the monopoly," he added.

"In the UK the argument is polarised on who owns what, but that is not the major question. The question is how it is organised and divided up."

From a technical or economic point of view the organisational structure of the communications industry had to move towards that of the computing industry, away from State administration towards competitive business.

Burroughs, who heads the Project Universe experiment in high-speed, packet-switched networking, drew attention to the two new transmission technologies, optical fibre and satellite transmission, and to developments in electronic switching.

He cautioned against too much reliance by communications companies on the 64 Kbits/sec rate

chosen for digitised voice networks. "One has the feeling that too heavy building in of 64 Kbits/sec would be a mistake. Computer people will see warning parallels with computer architectures having address ranges of 64 Kbytes."

Burroughs also had some reservations about the International Standards Organisation's Open Systems Interconnection standard reference model for the exchange of information between systems.

He argues that the model was proposed before satellite transmission technologies developed, and that it and its associated proposed standards do not allow for changes in the application of technology, do not allow for high speed information transfer, and do not cater for voice.

Project Universe, which is completing its first phase, a network which linked 150 computing de-

BURROUGHS... Reservations about the Open Systems Interconnection.

vices and 12 Cambridge Rings in seven centres to an orbital test-satellite via six satellite bridges.

The next phase of the project, currently being drawn up, will involve an experimental service using British Telecom's 2 Mbits/sec

digital point-to-point service Megastream. The Alvey Programme is to look after the research aspects of that phase. Logica, GEC and British Telecom have formed an informal consortium to bid the technology.

NCC offers guidelines to first-timers

NATIONAL Computing Centre offering guidelines for first-time micro users through a subscription service costing £14.50 a year.

The fee includes a 50% discount on half-day seminars and 10% training courses run by the Centre's Microsystems division.

23 more shops

W H SMITH has opened 23 new in-store computer shops, taking a total to 30. The first three were opened four months ago and for more were added to October. The sell a range of microcomputers, Acorn's BBC and Electron.

Singapore plant

MOTOROLA is to build a new microchip plant with research and development facilities in Singapore. A statement by the company's Illinois office said the factory at Ang Mo Kio will make communications equipment.

Call for tariff cut

A REDUCTION in the 17% tariff on semiconductors, to bring it in line with the 6% tariff on computers, has been urged by the Electronics Economic Development Committee. A message proposal has been sent to Kenneth Baker, Minister for Information Technology, asking the government to campaign for an immediate reduction to 10% at EEC's annual meeting on tariff in January.

Dealers named

ABS COMPUTERS, the UK microcomputer manufacturer, has extended down into the multi-microcomputer market with a Orb machine, last week appointed two distributors: London-based Minnie Enterprises will sell the Orb to the financial market and Satellite Computer Systems will set up a dealer network for the South of England.

Most was negated

IN last week's review of P. N. Teshey's *Principles of Test Engineering*, our reviewer, Richard P. Smith, wrote of the Status data management package: "It is useful in large organisations dealing with tens of thousands of articles, scientific abstracts, technical reports and so forth. It has an error this appeared as 'concerned'." We apologise to all concerned.

French job places may shrink

by Jack Gee
A FALL in jobs available for high technology engineers in France could cut recruitment by between 20 and 30% in 1984, according to the Association of Electronic and Computer Engineers.

The association says the job crisis reflects the precarious state of the French economy, which is undermined by domestic recession; inflation, which will top 9% for the current year; and rising unemployment in most sectors of industry.

Computer and electronics companies are likely to seek higher productivity from staff already on their payrolls, rather than recruit new personnel for expansion projects.

The engineers' association says that, following a government campaign to encourage early retirement, many white-collar veterans were replaced in 1982 by engineers hired for their first jobs. Very few experienced top-level staff were taken on.

This year, firms in the electronics and computer industry have slowed down recruitment of youngsters and have sought primarily to give themselves new muscle by attracting engineers with proven records. They are being hired for research and development and for marketing activities.

Although most beginners have until now found a first job within a month of graduation from college, this search period is likely to become increasingly longer, according to the association.

Young engineers risk taking three years to find a first job. Higher specialisation by French computer and electronic companies is emphasising the need for engineers with long experience.

The biggest shortage, says the association, is among engineers working in power electronics. Half the jobs advertised cannot be filled, the association says, because the colleges are not turning out specialists in this field.

Recruitment problems are also reported by firms seeking optoelectronic engineers.

Schools can run exams with help of free software

by John Riley
FREE software is to help over 500 schools administer their O and A level exams this year.

The software, designed and written by the University of Oxford Delegacy of Local Examinations, allows schools to enter details of examinees and the exams they are taking on floppy disc via their micros. The floppy discs are then sent to the examining boards HQ and read into its CTL 8046 computer.

Everybody stands to gain from the arrangement. If schools take part, each candidate gets a 25% reduction in exams fees, schools save on administration and do not need to calculate exam fees, and the examining board saves on clerical work involved in batching and checking entry forms.

The package, written in Basic, is tailor-made for each of the main micros currently in use in schools, including Acorn's BBC Micro, Research Machines' 8002, and Commodore and Apple machines.

"It encourages schools to use the micros they've got," said Paul Humphreys, deputy administrative officer to the board. "We have written the software in Basic, so that it can be used for teaching as well as administrative purposes."

A pilot scheme was first run with three schools in the autumn of 1982. Over 500 schools have now asked to take part, according to Humphreys.

PICK... "The aim is to de-mythify using the computer."

Brakes come off Pick in Europe

by Claire Gooding
THE brakes are coming off the Pick operating system in Europe, now that Pick Systems has declared an open market. The restrictive licensing agreement between Pick System and French manufacturer Intertechnique is not due to come to an end until August 1984, but Pick has already thrown open the arena for other manufacturers.

Dick Pick, author of the multi-user system, revealed in London last week that from December 1 the French licensee would have to sell against US manufacturers.

"Pick Systems has given up a portion of its royalties to enable its current licensee to go into the European market. By the same token, Intertechnique is now free to sell its systems to the world."

The contract with Intertechnique has meant that sales of the Pick operating system have been severely restricted in Europe. In France only buyers of the In-

tertechnique Multi-6 have had access to Pick's increasingly popular system, and Intertechnique did not take advantage of its position to push the Pick system into other European countries.

The rest of new low-cost systems using Pick's OS and its inbuilt relational database has fanned the flames of Pick enthusiasm to the degree that US manufacturers, such as General Automation, Ultimate, ADDS and Peric, have been clamouring for their share of the European market.

Richard Jowett, managing director of Sheffield-based BDP, confirmed that he had been tipped off as UK distributor for ADDS Menior. "We are poised to move into Europe and have already been talking to dealers in France. There's a huge market there and we're ready for it."

The prevailing opinion among suppliers of Pick-based systems is that Intertechnique has "set on"

the system, when it should have made it available on other kit. Rumours flew around Comdex Europe that Pick had written to suppliers telling them to gear up for sales in Europe, and not be too concerned about trading on Intertechnique's toes.

Pick denied that there was any bad feeling between the companies.

Intertechnique director Edward Merchegat's only comment was that the company was negotiating a new contract with Pick.

The whole system has been restructured so that it can support other operating systems, such as Unix, as a subset of the Pick software. "There are also improvements in user interface."

"The whole aim is to de-mythify using the computer for end users," said Pick. "To my way of thinking the next step is voice recognition."

Win £1,500 in Pick competition - page 25

£420,000 invested in software firm

by Dave Medden
TWO British institutions have put £420,000 into Assyst, a software and services company, for a 35% stake.

Commercial Union Assurance and Baker Street Investment Company (Basic) will each have a 17.5% holding in the company.

Assyst is the holding company for Assyst UK Computer Services, a wholly-owned subsidiary of Assyst-RAET, based in Holland.

John Wallace, Assyst marketing director, described the UK company as "a multi-service vendor,

supplying everything from junior programmers to senior business consultancy and project management". In effect Assyst is a Hewlett-Packard OEM that it handles Data General kit too.

The Assyst-RAET group employs some 650 people, of whom 60 are based in the UK. It predicts turnover of £25 million in the fiscal year to December 31 against £20 million last time. Assyst will contribute about £1.5 million, and it is looking to triple that figure by 1985.

Managing director Theo Bosman said the company needed the

cash "to increase our services, develop new products, and acquire systems houses".

When Assyst goes on the acquisition trail it will have two basic criteria: one is geographical - the moment the company has four offices, in Leighton Buzzard, Washington, Livingston, and Aberdeen - so it will look for a systems house in the Midlands or North-west.

Similarly it wants to bring new skills into the company - either by buying a vertical market specialist, or an outfit with Wang, or IBM System 38 experience.

Tandon allays fears

by Keith Holder
NEW quality control procedures have been adopted by disc drive manufacturer Tandon International in a bid to allay fears about its product quality. This follows severe criticism and a £10 million lawsuit from Torch Computers over deliveries of faulty or incomplete drives.

"We admit there were serious problems," said European general manager Bruno Kaelberer, "but rather than sit around we have done something about it."

From August this year the way the company deals with product quality has changed. Instead of each division operating independently, all European centres come under the direction of a central manager.

Kaelberer said European sites had now improved test equipment and were able to carry out mechanical and electronic testing and repairs without having to rely on the US parent.

"We are aiming for zero defects in our drives. No one is that good, but we expect to get close. Our problems started because we had so many orders and were shipping a huge number of products."

YAMADA... Breakthrough.

Sord launches 32-bit challenge to Vax in UK

by Keith Holder
JAPANESE micro manufacturer Sord Computer Systems has launched in the UK its first 32-bit machine, which it claims will outperform minicomputers like Digital Equipment's Vax.

The M685 uses two Motorola 68000 processors and a four Kbyte cache memory to achieve processing speeds up to 1.25mips.

"We see this as a breakthrough in performance levels for microcomputers," said UK general manager Michihito Yamada.

The machine has sold well in Japan since its launch in May, with orders for over 1,000 units.

The British market, though different, could produce the same results, said Don Cater, deputy sales manager.

Although the machine will be offered to all sectors of the market, he saw the main emphasis to be on software houses, scientific establishments and universities. The latter would be attracted by the price tag of £16,500 for an entry level system, said Cater.

It will run Unix software and support high level languages, making it suitable for use as a development tool, he added.

It is designed to expand into a multi-user system, and can have up to 12RS232C ports. Networking facilities through the company's own network or X25 wide area systems is provided.

A 32-bit data bus allows access to all memory for high performance and direct memory addressable peripherals.

The machine uses Sord's Unos operating system, which supports Unix and is particularly suited to multi-user systems, said Cater. It offers real time file access facilities, background tasking and context sharing.

In addition, for applications like CAD/CAM, there is an optional high resolution colour graphics terminal with built-in Sord graphics language, and a colour vector printer.

The hardware design for the machine was carried out by the US-based Charles Rivers Group.

16-User Simultaneous CP/M-80 and CP/M-86

The ACCRON - Multi Processor System - architecture has one service processor and up to 16 Z80 and/or 8088 based user processors. Each has high speed (1.7MB/sec) access to the shared resources such as disks, tapes and printers. The main features are:

- * All standard CP/M-80 or CP/M-86 software will run simultaneously without modification.
- * All systems can be fully upgraded by simply adding more slave processor boards.
- * Z80A based slave processors run CP/M-80, have 64KB RAM, 2 serial ports, 1 parallel port.
- * 8088 based slave processors (8087 optional) run CP/M-86, have 128KB RAM, 2 serial ports, and memory can be expanded to 896KB.
- * Comprehensive multi-user file management supports file and record locking.
- * Automatic print spooling, system printers, local printers and inter-processor communications are

Fully supported:
* Field proven with over 100 installations.
* Home User's Institute.
* British Telecom.
* NHS Local Authorities.
* Many multi-user systems, colleges, are implemented including multi-user Omnicom Management Software.
* Taylor Micro Manufacturing Software, Datatex and OBASE II.
* Latest range of microcomputers based on 8.25, 1.44, 1.25, 5.25 inch floppy or cartridge disk drives.
* 12-bit single-user machine with 81 1.3MB floppy and 10MB Winchester from £2400.
* More details from John Aherne or Steve O'Donnell.

Controlling your Company's Data

A one day seminar on Data Administration for senior management

London, Tuesday 6th December

Phone Karen Rowlands on 01-405 8233 for details

CACI, Inc. - International

296 High Holborn, London WC1V 7JH

Specifications of the new Walters WM80
Printing methods Impact dot matrix.
Printing formats Alpha-numeric: 7 x 8 in 8 x 9 dot matrix field. Semi-graphic (character graphic): 7 x 8 dot matrix. Bit image graphic: Vertical 8 dot parallel, horizontal 640 dots serial/line.
Character sizes 2.1mm w x 2.4mm h / 7 x 8 dot matrix.
Character set: 228 ASCII characters.
Normal and italic alpha-numeric fonts, symbols and semi-graphics.
Printing speeds 80 CPS, 640 dots/line per second.
Printing directions Normal, Bidirectional, logic seeking. Superscript and bit image graphics: Unidirectional, left to right.
Dot graphics density: Normal: 640 dots/190.5mm line horizontal, compressed characters: 1,280 dots/190mm line horizontal.
Line spacing: Normal: 4.23mm. Programmable in increments of 0.35mm and 0.118mm.
Columns/lines Normal also 80 columns.
Double width: 40 columns.
Compressed print: 142 columns.
The above can be mixed in a line.
Paper feeds Adjustable sprocket feed and friction feed.
Paper types Fanfold. Single sheet thickness 0.076mm to 0.25mm.
Paper width: 101.6mm to 254mm.
Number of copies Original plus 3 copies by normal thickness paper. (Max 0.25mm. Total thickness of 4 ply).
MTEB's million lines (excluding print head life).
Dimensions 377mm w x 295mm d x 125mm h incl. sprocket cover.
Weight 5.3kg approx.
Power requirements 240 v ac.
Data transfer rate 4000 CPS max.
Serial interface RS232C By external supplied STROBE pulses.
Handshaking by ACK/NACK or BUSY signal.

£199

Now you can have a ruggedly built, handsomely styled, highly versatile printer with a performance as impressive as its price.

The new WM80 is an 80 CPS dot matrix printer which interfaces with most popular micro and personal computers. It comes direct from Walters Microsystems International at the unprecedented price of £199 + delivery + VAT by security courier.

Impressive performance
The WM80 is bi-directional and logic seeking. It prints normal and italic, upper and lower case alpha-numeric characters at 80 columns per line, compressed characters at 142 columns, double width, plus symbols and semi-graphics.

Ordering your WM80
The WM80 can be ordered by phone on 0494-32751; or by sending this coupon to: Walters Microsystems International, Matrix House, Lincoln Road, Cresswell Industrial Estate, High Wycombe, Bucks HP12 3RD. Despatch is normally within 7 days by security courier, but please allow 28 days for delivery. Alternatively, you can collect your WM80 in person from Monday to Friday, 9.30 - 5.00. Saturday 9.30 to 12.30.

Programmable functions
The standard interface is Centronics parallel, RS-232C (SERIAL) is available as an optional extra. Programmable functions include variable margins and line spacing, horizontal and vertical tabulation, and 7 International language character sets. In total, it offers a 228 ASCII character set and has self-test facilities.

Major control codes include NUL, buzzer, backspace, line feed, horizontal and vertical tabulation, paper advance, carriage return, shift in, shift out.

Paper transport is by adjustable sprocket feed or friction. It uses fanfold paper, from 4" to 10" wide, printing up to three clear copies from an easily changed cartridge ribbon. Life expectancy of the print head is approximately 30 million characters.

Ordering your WM80
The WM80 can be ordered by phone on 0494-32751; or by sending this coupon to: Walters Microsystems International, Matrix House, Lincoln Road, Cresswell Industrial Estate, High Wycombe, Bucks HP12 3RD. Despatch is normally within 7 days by security courier, but please allow 28 days for delivery. Alternatively, you can collect your WM80 in person from Monday to Friday, 9.30 - 5.00. Saturday 9.30 to 12.30.

To Walters Microsystems International Limited

THE OLD BOYS' NETWORK

The Universities had a problem. They had difficulty communicating internally, let alone with one another. They needed to network their computer systems and terminals to provide access to on-site hosts. And also to the off-site facilities of the integrated academic network.

The Camtec INT-PAD did just that. As a PAD it links VDU's, printers and micros into X.25 based local area networks. As a reverse PAD it provides port contention and X.25 access to non-X.25 hosts. As an X.25 switch it links together PAD's, on-site and off-site X.25 hosts. As British Telecom approved for connection to their Packet Switch network, it provides the connection to the Public Data Network.

The INT-PAD is only one of a range of products within the X.25 and LAN fields manufactured in the UK by Camtec.

Call us on 0533 537534 and find out how to get on the Old Boys' Network.

To: Camtec Electronics Limited,
Melton Street, Leicester LE1 3NA.

Please send me full specifications for the INT-PAD.

SOFTWARE FILE

ICL plugs gap in its armoury

ICL is taking on a new applications generator for its small DRS-20 range of business computers.

Called Sourcewriter, it is the brainchild of Martin Anderson, formerly with Adabas and Logica. Some of the development work on the system was done while he was still at Logica, which now gets a royalty for it.

Anderson has set up on his own at West Byfleet, Surrey, with five others, under the name of Software. Sourcewriter is a generator written in Cobol and generating Cobol code, running on ICL and IBM personal machines and other micros supporting the CP/M, MPM and MS-DOS operating systems.

ICL has now begun distributing it worldwide under its own label, trying to stop a gap in its software armoury. It is also being marketed by Micro Focus.

Anderson claims the tool enables systems to be developed for as little as £5,000, compared to perhaps £60,000 for a conventional software approach.

"People have talked of clearing

ANDERSON... "Should help to clear the systems analysis backlog."

the applications backlog. We think Sourcewriter should help to clear the systems analysis backlog as well."

The concept behind the system

is that analysts can quickly create specifications, take them to the end-user for discussion, and go back and modify them afterwards, said Anderson.

Ignorance holds expert systems

by Claire Gooding

BIGGEST problem for Nexus, one of the first commercial expert systems to be launched in the UK, could be public ignorance. Helix Products and Marketing put its Financial Advisor, based on the Nexus expert system, on show last week at the Accountants' Exhibition at the Barbican in London.

The system is aimed at businessmen and professional users, but, reports Helix managing director Dr Laurence Shafe, they may not be ready for such advanced technology.

"There are a lot of obvious benefits, but the public needs to be made more aware of what an expert system can do before the business world understands," he commented. "There was a great deal of interest but we had a lot of explaining to do to the accountants and business people who saw the system, about the benefits it offers."

"The feeling we got was that the average accountant was aware of the fifth generation of computing as something covered in the Press, but didn't yet see it as relevant to him - certainly not something associated with his job."

The Financial Advisor is one of a series of Nexus-based systems running on the IBM Personal Computer which Helix is putting on sale in the UK. Among those already developed are Financial Advisor for business management and the diagnosis of financial problems, Investment Advisor for investment analysis, and Car Advisor for people deciding how to buy a car, and which to buy.

Other areas targeted for such automatic advice include personnel, loan administration, tax, staff allocation, and company tax. Helix has spent about £500,000 on the development and marketing of the expert systems products, having received one-third of the

funding from the NCC Software Products Scheme. Dr Shafe has been working with intensive knowledge-based systems for 11 years, and is turning his expertise to commercial use by tapping Helix's own financial and management knowledge.

"Nexus itself is at the core of all the systems," he explained. "It's a matter of what knowledge base is 'wrapped around' the brain."

The Financial Advisor, for example, can solve specific problems such as cash liquidity, it considers all the usual solutions and as an increased overdraft, long-term borrowing, selling assets, leaseback, credit control, and other factors.

"The system is easy to use and explains its reasoning," said Shafe. "It is not just a black box which presents a conclusion and says: 'this. Expert systems would be used if they did that."

SAAR... Start during the first half of 1984.

Newbury to make Maxtor drives in UK

by Dave Madden

NEWBURY Data Recording will sign an agreement this week with Maxtor of Santa Clara, California, to manufacture Maxtor's high-capacity mini-Winchester drives in the UK.

Marketing director Rod Saar says Newbury will start producing the drives at its ex-ICL plant at Winsford, Greater Manchester, during the first half of 1984.

Initially it will make Maxtor's eight-platter, 143 Mbyte, 5¼in drive, but Saar says Newbury intends to take the 310 Mbyte model eventually.

Saar hinted that his company had a sub-5¼in drive in development. Newbury already has a licence to build 5¼in fixed and removable drives from DMA Systems of Santa Barbara, California, which it sells as the 805. The company hopes to produce 6,000 units in 1984.

Memorex builds the DMA drive there too. Newbury is doing its best to help the British Technology Group to get rid of some of its 100% holding in the company. It is

predicting an obliging £40 million turnover this year, against £28 million last year, and hopes to manage 45% growth in 1984.

Newbury's peripheral business in 1983 split into sales of £15 million worth of printers, £8.5 million of disc, and £6.5 million of VDUs. Media, services, and maintenance make up the balance.

Saar said the company shipped 15,000 printers during 1983. He is looking for 28,000 units in 1984, which would bring in about £27 million. Newbury is previewing a new 12-needle "near letter-quality" printer, and has an 18-needle machine in development.

Newbury sold 10,000 VDUs of its own manufacture in 1983. Saar expects to shift 14,000 next year, and as many as 30,000 in 1985. The company has a new VDU, the 9500, which will come with 12in, 14in or 15in display and cost less than £400. The machine will lead Newbury's export drive in 1984.

The company has recently introduced a bysync to Ascll protocol converter, the 8274. Microscope provided the software, and the device can handle 14 terminal types at one time.

FT makes its first move into software

by Nuala Moran

THE Financial Times moved into the software business last week with the launch of a financial modelling package for 16-bit micros.

The package, called FT Moneywise, was developed by Moneywise Software Limited (MSL), a small independent company set up about a year ago. MSL took the package to the FT because it decided the average reader was the type of user it wished to reach. The two companies have established a joint marketing agreement.

The FT intends to launch other packages and Simon Blisson, of MSL, said: "We will be taking more products to the FT including enhancements to FT Moneywise. He emphasised that although the FT was endorsing the product, it was in no sense badge engineering. FT Moneywise has been recognised by the National Computing Centre, which has awarded MSL £350,000 through the Department of Trade and Industry's software products scheme grant.

The Financial Times claims that

FT Moneywise is 10 times faster than competitive products. It will initially be available on the Sirius and the IBM-PC, and there are plans to adapt it to other micros. Blisson said: "We will make it available on all the sellers."

It costs £395 plus VAT. A dealer network of about 200 will be set up, but sales to major customers will be direct from MSL which will also offer a support service for £145 plus VAT a year. This gives subscribers access to a hotline and enhancements at least twice a year.

Speaking at the launch of FT Moneywise, Joe Rogaty, chief executive of the FT Business Enterprise Group said: "The FT enterprise group is in the information business; essentially we are a communications company. We are active in electronic information services. This has brought home to us the importance of good software."

Last month the FT announced a tie-up with IIT to establish an electronic business news service. International Financial Intelligence

BTG keeps selling but Oxford cheers it up

by Dave Madden

THE British Technology Group is to sell its interest in Systems Programming Holdings, in an effort to dispose of its equity holdings.

The Western Broadcasting Company of Vancouver has agreed in principle to acquire the National Enterprise Board's 40% stake in SPH for an undisclosed sum. WBC, whose activities include satellite broadcasting, already had a controlling interest. It bought 60% of the company in 1981.

SPH is the holding company for

Systems Programming Ltd, (SPL), the systems and software house which organised this year's SPL Insight fifth generation conference.

Managing director David Thompson says the deal will give fresh impetus to SPL's ambitions in the US market.

"Although we have a company incorporated in New York, we are really just opening up shop. WBC gives us a US infrastructure and high level contacts. They are a powerful committed partner that

knows how to do business in the US," he said. SPL will push its banking and financial systems, and its interest in artificial intelligence in the US.

Thompson pointed out that WBC brings huge financial resources to SPL. It recently invested £1.25 million in the company. SPL had a turnover of £10.7 million in 1982.

It is a happy day for the British Technology Group when it gets a prompt return on its investment. Oxford Applied Research, (OAR),

has given it just that. Oxford Applied Research has repaid a £50,000 loan, made by the BTG's Oakwood Loan Finance arm, with interest. OAR has also repurchased the BTG's option to acquire 20% of the company.

OAR was established in 1978. It used the BTG grant to fund development of ion beam systems used in semiconductor manufacture and the milling of gallium arsenide. OAR has now licensed the technology to the Oxford Instruments Group.

Brewers come to the rescue of IBM users

by John Riley

THE UK's second largest brewer, Allied Breweries, this week moved into the computer services business with a disaster recovery centre for IBM users as its first service.

The new company, Allied Advanced Information and Manage-

ment Systems (Aims), is the commercial arm of Allied's management services division, which had a £10 million turnover within Allied Breweries last year.

Aims offers the use of its 3032 mainframe and ancillary facilities, including accommodation and its

own airport to clients.

"We bought a 3083 mainframe and found ourselves with the 3032, plenty of space and expertise which were ideally suited to setting up this service," said Mike Connolly, Aims' sales and marketing director.

"For a flat £40,000 a year we give clients priority use of our 3032 for an agreed number of days, usually 21, in the event of a disaster. That allows them to carry out essential batch-type activities such as payroll, and mitigate the consequential loss."

10 Downing Street
Whitehall

Dear Bill,

Welcome to the club. Your letter gave me such pleasure that I slipped it in among the Despatch papers and made sure that M read it too. The fact that you've shown the wisdom to purchase your own Fortune 3216 is, in her eyes, a redemption from your effect on her was as dramatic as if she'd suddenly discovered the true wonder of Scotland's golden fluid. She sat bolt upright and made several pronouncements entirely in your praise.

I imagine that each time I wrote to you of the marvels of the little number cruncher, you were thinking "the doddering old wreck's finally going doolally". Well, now you know the truth. The power and versatility of this little wonder is positively invigorating!

Now that you are also about to become a contented user, you too can lay a strong claim to possessing the essence of youth. Time now to leave the other chaps standing. As far as I can make out, this phenomenon is spreading through our entire generation. Nearly every pal I've got is not only hooked on this DMS Fortune idea, but also getting hooked up on this Ethernet thing.

You may remember in my last letter that I mentioned having placed an order with our favourite viñner Poocock and Poocock. At the time I couldn't help speculating about what the Fortune 3216 could do for their booze business. Well business over there has sharpened up so dramatically that he's just had a crate of champers wheeled round to the front door here, worked for my personal attention. With Unix software, and the power of a mini wrapped up in a micro, the Fortune 3216 has turned Old Poocock into a complete Electronic Manager. He's using it to monitor sales and purchases, control stock, run the payroll, invoice sales, initiate purchases, and even plan long-term finances - although I must say the latter seems a little optimistic in view of his extended acquaintance with Father Time.

At the brewery whose board I recently mentioned that I now sit upon, they appear absolutely delighted that I'm now able to conduct most of my business with them from the office here. They've even provided a 3270 Protocol to book me up to their mainframe.

Of course, on a personal note the implications for the likes of you and I are enormous. No longer will we have to resort to old-fashioned paper and typewriter hammers to communicate. Ours is a world of Electronic Mail in which we flash messages onto the screen of a little number cruncher. It's the beauty of this little wonder that it can be used in so many ways. I'll be happy to help you with any of the things you may want to do. I'll be happy to help you with any of the things you may want to do. I'll be happy to help you with any of the things you may want to do.

Record deal for generator

RECORDING firm Island Records is using an applications generator as the speediest way of tackling massive accounts and royalties.

The system, costing £300,000, will be used to link Island offices in London, New York and Los Angeles, providing the company with management information and complex accounting to cope with its artists' worldwide royalty payments.

Island has already installed a Digital Equipment Vax 11/750 mainframe in its Hammersmith, London, headquarters. The applications generator chosen for the job is RIMS/MPG from US firm Information and Research Systems, one of the few development tools which works across the DEC range, producing amendable source code in several languages.

The online system is being written by City Consultants of Barnes, in co-operation with ISR's exclusive UK distributor Delfont Computing of Byfleet. Managing director of City Consultants, Roland Morris, hopes to complete the system in nine months, well below the original estimate of two years.

The DEC hardware was chosen partly because of RIMS' availability, since the deadlines on the project are tight. The programs produced by the generator can be amended by hand, or, at a higher level, be changed by users themselves by way of parameters to produce their own graphics and report programs.

"As well as providing the full range of accounts and project control software, we're writing some very complex applications such as worldwide consolidation," explained principal consultant Tim Twissam of City Consultants. "It will enable the people at Island to get instant feedback on which records by particular artists are getting good chart sales, in various places in the world."

Twissam estimates that the system will be complete by the end of the year, even with only two people working on it. Using RIMS, we cut down from the original estimate of eight man-years to two man-years," he said, "and we're working fast."

ISR has recently upgraded RIMS to make the report genera-

Commodore men go into educational publishing

by Claire Gooding

ONE of Commodore's top marketing people has formed his own software marketing company to publish educational software. As drew Goltz, formerly head of the Commodore Supply company, has set up Logic 3 "to bring professionalism to home computer software publishing."

Goltz is joined by print and packaging man Tony Toller, who founded Unprint, and Professor of Computer Studies at Strathclyde University, Andrew Caw, whose teaching methods on Caw were packaged for Commodore machines and sold 250,000 copies. Commodore special projects manager Nick Green is also involved in the company as an investor and non-executive director. He is not leaving Commodore but will act as a consultant.

Logic 3 is aiming for the home computer market already embraced by high street stores like W. H. Smith. Although the first products centre in on Basic, Commodore Logo as an important development in educational software. He is discussing a deal with Kool Software Corp to the US which would bring the Language to the UK at low cost, complete with training manual.

"Logo will be as historically important as Basic," said Goltz.

Wang signs \$500,000 deal

A DEAL with Micro Focus for the Cobol compilers is taking the company closer to the mainframe environment.

Wang has signed with Micro Focus for £500,000 worth of software, including the Level II Cobol compiler, the Animator 2.0, Forms 2 development tools, and the Native Code Generator. Wang is also developing a new Wang Professional 2.0 compiler.

This deal is part of Wang's strategy to bring its office suite products in line with the mainframe market. Wang is also developing a new Wang Professional 2.0 compiler.

The Financial Times claims that

Advanced productivity systems for software development and office automation.

unix
based software

Part of our XUIRE product range

Productivity will improve with a UNIX operating system. You will gain more productivity with one of INTERACTIVE's expanded UNIX systems. But system designers, programmers and support personnel will achieve the best gains with the complete set of tools provided with INTERACTIVE's Advanced Productivity System (APS).

APS systems come with a two-dimensional screen editor for fast and efficient text editing, electronic mail, and networking facilities not found in other standard UNIX environments. In addition, we provide an easy to learn word processing system. Optionally, we provide text editing terminals, especially designed to enhance our editor and word processing system, which are microcoded to help offload the CPU.

Two versions of the Advanced Productivity System are available. IS/3 is the solution if you are looking for a standard commercial system based on UNIX software. It is a full implementation of UNIX System III. IS/3 has enhancements, including increased block size, a queuing system, and streamlined system management tools, to make it an even more productive system.

If you need UNIX software facilities running under VMS, IS/VMS is the answer. IS/VMS is fully integrated into DEC's VMS environment; it is not just a separate subsystem. So you will have a logical integration of both operating environments, and more important, much higher performance than other emulation systems.

Our systems come with complete support, maintenance and training. Other productivity systems and additional packages based on UNIX software, including RJE facilities, communications, and cross compilers are available.

If you are interested in productivity, you will be interested in APS. For more information, please return coupon to:

Aussie high-flyer comes good in UK

IAN DIERY, Wang's UK managing director and recently appointed vice-president for Western Europe, is a keen sportsman. He regularly plays wing forward in Richmond Rugby Club's veteran team, picking up the occasional black eye, and also plays a lot of golf and tennis.

The large framed picture of the America Cup-winning yacht Australia II prominently displayed on his office wall at Wang's headquarters in Hampstead leaves no doubt as to his nationality.

Diery arrived in the UK in 1978, having been a high-flyer in Australia. After studying civil engineering he joined a video-taping company, and by the age of 23 was running operations for the State of Victoria.

He started up his own company in the same line of business, and after selling out in 1978, travelled to Europe and the UK - "as every Australian does," he quips.

On arriving in the UK, he fixed up interviews with IBM, Xerox and Wang. Wang was the first to interview him and he took a job as salesman on the spot without waiting for the other interviews. He moved up rapidly to become managing director for Wang UK in 1981.

Diery says that he is hugely im-

pressed by the UK. "There is so much talent here, but it lacks direction. The UK has exported so many standards, such as language, banking techniques, law, government. The real challenge now is for the UK to overlay technology on top of those carriers."

His new appointment will mean a few changes. "I will have less day-to-day involvement in the UK. The UK is the fastest-growing subsidiary, but that doesn't mean the methods used here will work on the continent - one has to be careful and not bulldoze UK methods."

by John Riley

Wang UK has been growing rapidly under Diery and the end of year figures in July showed a 47% increase on the previous year to £50.9 million. The secret of Wang's success is that its word processor products got the Wang name on people's desks.

"Wang separated the word processing and data processing sales efforts, and that tactic is paying off. We recently sold 120 VS systems to a customer who had previously bought just one Wang word processor," he told me.

It is because of the proven suc-

cess of that strategy that Diery is pulling out all the stops to get Wang's Professional Computer on desks where they can be integrated into networks.

Diery is not content with the shakeout canvassing the micro market but believes that Wang is "well-insulated."

He also thinks that "other companies have sold too many personal computers at a loss, allowed their inventories to build up, and haven't got their manufacturing costs down low enough. There are also a lot of single product companies which are vulnerable and can't get out of the way when IBM moves."

Diery's recipe for success is that companies need a systems approach. "Firms need their own manufacturing, their own R&D, their own marketing and support, and then they can set up worldwide."

"We are finding that the shakeout is helping us," said Diery. "Our personal computer dealer network is picking up and people are looking more closely at us all the time."

"We are encouraging the dealers into the areas that are not economical for us, particularly with selling standalone personal computers. We give leads to dealers in those areas."

Wang has no intentions of following IBM into the home computer market. "The very low end is like the calculator market," said Diery, "and Wang moved out of the calculator market years ago."

Looking to future developments, Diery says: "I believe that to do well in the DP world you have to break traditions." He is keeping Wang's own developments close to his chest, but is excited by the Professional Image Computer which was launched recently in the US, and believes there is a strong future in

DIERY... "There's so much talent in the UK but it lacks direction."

voice messaging and integration. "The huge power of the personal computer still needs a structured input and is getting harder for the non-DP person to use," he says. "The real breakthrough will be when we can put unstructured data in to all the machines we make."

Diery is placing great emphasis on an software development. "We now have 35 to 40 software developers for the personal computer and are getting our act together. Software houses are now coming to us whereas previously we went to them," he adds.

"Five years ago, word processors were the Cinderellas of the industry," he says. "It is a difficult step for a word processing company to move into DP or a DP company to move into word processing, and we are proud of our achievement."

Diery notes with satisfaction that the VS minicomputer has taken off - "we are getting many more multiple orders now." He does not forget the role that the word processing side of the company has played in helping others.

There has been a certain amount of turmoil in the DoTI this year. After the June election Cecil Parkinson was brought in to replace Patrick Jenkin. The trade and industry departments were merged. Parkinson's tenure was brought to an abrupt end because of his social indiscretions, and Tebbit was brought in to take the reins.

That being said, the government continues to talk about the importance of high technology and services industries. Fine words, without the seed money which is needed, leave the government open to criticism of shortsightedness.

Other DoTI schemes to foster new technology are also understood to be marking time. It is not clear whether the problem is indecisiveness on the part of ministers, the general restraints of the government's monetary targets, or the dislike of any projects which might be termed interventionist. Whatever the cause, the effect is apparent. Innovative and inexpensive schemes are being stifled.

DOWNTIME

Down the salt mines?

FROM time to time everyone suffers from "finger trouble" while out on the old computer frontier, but most of us manage to recover before someone else notices. A lot of us would be out of a job by now otherwise.

Not as lucky was one unfortunate computer operator at Soviet news agency Tass' headquarters. While pumping out the usual exciting news such as the cost to Moscow of cleaning the snow off its streets (45 million roubles a year for those of you who must know) this hapless operator put one of the wrong files down the

wire. And a number of bored people manning the printers at the other end of the line - in embassies and news offices - found themselves reading a rather detailed account of work on an optical memory system being developed for the US military.

But only for about 400 words' worth, for the mistake was noticed and the report cut off in full flood. Tass isn't saying a great deal about where the information came from or where it was really supposed to go but it isn't exactly the diplomatic coup of the year.

And it isn't saying anything at all about any new posting for its duty operator.

It's a tough life being a hack

SOME Miss World hopefuls, including the winner, visited our Compo exhibition last week - but the star of the show was their hunky chaparrone (44, 40, 42), who was determined that none of us hacks were going to get near enough to his girls to ask them what they thought about cruise missiles and birth control.

He was reaching for the shoulder holster when a Computer Weekly hack dared to ask which countries the ladies were from. He mused in quickly shouting, "no interviews, no interviews!"

And after taking one picture a Superphotographer was told to "back off" (at least that's what it sounds like).

The contestants were just expected to stand there by a terminal looking pretty. I hope they enjoyed their visit to Compo.

So much for romanticism

THERE was more than a touch of inverted snobbery at last week's Pergamon Infotech conference on the state of the art in information technology.

Many of the company presidents and managing directors invited to speak found themselves unable to resist the opportunity to plug their own companies, and the assembled delegates were treated to slides of garages and attics where successful systems houses began their days.

It practically descended to the "I remember when I was a lad and I founded a company in a shoe box" level.

But they were all outdoors by Ian McNaught-Davis, founder of Comshare and presenter of the BBC series *The Computer Programme* and *Making the Most of the Micro*.

He was abashed to admit that the one thing that was at a

DP leaves the closet

THE computer industry is developing a bent for the sensational story. In London last week, Earl Joseph, once chief engineer at Sperry Corp, spoke of brain cells being grafted on to microchips as the logical outcome of the impending marriage between biotechnology and computer technology.

On the West Coast of the US, the US State Department made Silicon Valley a "no-go" area for Soviet citizens and diplomats. And in Sweden, four crates believed to contain a DEC Vax minicomputer were stopped by customs officials who suspected shipment to the USSR.

The *Sunday Times* billed the crates as containing a complete missile guidance system, while a US customs officer, perhaps a bit closer to the mark, said the equipment could be used for just about anything.

"Spies and bio-computers provide the kind of excitement which ensures that trade papers like *Computer Weekly* no longer have the computer industry all to themselves. National newspapers, television and radio are all devoting more and more attention to what was once a specialist field.

It is often easy to sneer at their "unsophisticated" coverage. That is a mistake. Sensational as our industry is becoming, it is finally coming out of its closet, and becoming accessible. That is a painful, but necessary part of growing up. It can also be fun.

Stop nit-picking over IT money

IS the UK government interested in information technology or not?

This week the Department of Trade and Industry has stalled over a small £16,800 grant to fund a project designed to bring university software to market through services firms. The object is to tap the commercially vast amounts of software waiting in universities for suitable market outlets.

Academics do not have the time or expertise to package and sell software. The project, proposed to the DoTI by the National Computing Centre, would be an inexpensive way of putting services firms in touch with a ready source of products.

The scheme, which has been brewing since the start of the year, has already received tacit governmental approval. Alistair McDonald, head of DoTI's information technology division, said he was happy with the idea. But a decision for the go-ahead has again been postponed.

The university software scheme is not the only one awaiting approval.

There is still no decision on the future of the ExportIT programme. In its first year ExportIT gave UK companies export contracts representing business totalling £10 million. ExportIT was given £250,000 in governmental funding in 1981, and has managed on that since then. The director of the programme reckons with something less than £200,000 it could become self-financing in three years.

The future of ExportIT has been under review since December of last year. It was believed to be near the top of the in-tray after the June election. But the decision making process in the DoTI drags on.

There has been a certain amount of turmoil in the DoTI this year. After the June election Cecil Parkinson was brought in to replace Patrick Jenkin. The trade and industry departments were merged. Parkinson's tenure was brought to an abrupt end because of his social indiscretions, and Tebbit was brought in to take the reins.

That being said, the government continues to talk about the importance of high technology and services industries. Fine words, without the seed money which is needed, leave the government open to criticism of shortsightedness.

Other DoTI schemes to foster new technology are also understood to be marking time. It is not clear whether the problem is indecisiveness on the part of ministers, the general restraints of the government's monetary targets, or the dislike of any projects which might be termed interventionist. Whatever the cause, the effect is apparent. Innovative and inexpensive schemes are being stifled.

LETTERS

Cool reaction to a review

I HAVE read Arnold Arnold's "review" of my book, *Build Your Own Export System* (*Computer Weekly*, November 10) and would like to draw your readers' attention to the method which he attributes to me.

He describes it as follows: "If you believe that a cold day is likely to be followed by a warmer one (or vice versa) and that this increases the likelihood of rain by 60%, you then enter that fact on your informational matrix."

"If you think you know something else that creates a likelihood

of rain, you enter that figure as well.

"You then average the total and get 50%, which is the probability of precipitation for tomorrow."

I should like to make it quite clear that at no point in the book do I suggest such a method of working. I would also like to make it clear that I cannot think of any situation in which such a method might reasonably be applied.

If, as he claims, the statistical analyses I provide are "all known to most secondary school students", then that is clearly a level

of education to which Arnold ought usefully aspire.

Without dwelling on any other inaccuracies contained in the "review", I would simply point out that these errors could have been easily avoided by the conventional technique of reading the book prior to publishing a review thereof. This may seem like a hard way to earn a reviewer's fee but, honestly, such a method as described could not have been entertained by anyone who had managed to get beyond, say, page 22.

CHRIS NAYLOR
c/o Sigma Technical Press.

Too old to work at 35?

AS a systems graduate with data processing experience from 1965, I am puzzled by the report of Andrew Thomas (*Computer Weekly*, November 10) that Fred Jennings' Jensechets are an excellent primer.

However, in Jennings' November 10 article, he is incorrect in asserting that basic modems may not be used on British Telecom leased circuits. As any unwary user, who does not use baseband modems for remote data links in the immediate area, will spend much more than he needs to, this letter will try to put the record straight.

There is, we acknowledge, a lot of confusion in this area. Baseband modems, line drivers and limited distance modems are not synonymous. Line drivers transmit original data to line, without using any modulation scheme. Therefore, it is incorrect to call them modems (modulator/demodulators), although they use baseband line circuits. They require DC line coupling and continuity and are, therefore, hazardous to use between remote sites between which potential differences (voltages) may exist.

The effective operating range of line drivers is inversely proportionate to the transmitted data rate.

DAVID STREET
Marketing manager
Gandalf Digital Communications
Warrington.

Putting Erlangs to the test

THE article (*Computer Weekly*, November 3) by Donald Kennet quotes BT director John Alvey describing a new telephone exchange as "a 1000 Erlangs (calls per hour) exchange".

I have frequently used the "Erlang test" as a test of competency in telecommunications, and it is sad to see that John Alvey (of all people) is reported as failing it. I hope that it is in fact not him but your reporter who is not aware that an Erlang is a measure of traffic

Baseband confusion

I AGREE with my old friend Martin Hewitt (*Letters*, *Computer Weekly*, November 10) that Fred Jennings' Jensechets are an excellent primer.

Limited distance modems are correct and unlimited distance modems, lacking the auto-equalisation circuitry needed for the latter to work reliably at high data rates. Our own LDMS will typically operate at up to 200 miles over BT schedule D circuits.

Baseband modems (also known as local modems, short haul modems or limited distance data sets) use original data as the modulating signal in a form of pulse code (or digital) modulation. This enhances effective receiver sensitivity (hence range), relative to line D drivers, and eliminates any need for DC coupling/continuity, with the attendant problems.

In summary, line drivers are best restricted to on-site circuits although, even here, lightning induction can be a problem on many sites. Baseband modems can be used with confidence on-site or on BT provided external baseband circuits.

Line drivers transmit original data to line, without using any modulation scheme. Therefore, it is incorrect to call them modems (modulator/demodulators), although they use baseband line circuits. They require DC line coupling and continuity and are, therefore, hazardous to use between remote sites between which potential differences (voltages) may exist.

The effective operating range of line drivers is inversely proportionate to the transmitted data rate.

Putting Erlangs to the test

THE article (*Computer Weekly*, November 3) by Donald Kennet quotes BT director John Alvey describing a new telephone exchange as "a 1000 Erlangs (calls per hour) exchange".

I have frequently used the "Erlang test" as a test of competency in telecommunications, and it is sad to see that John Alvey (of all people) is reported as failing it. I hope that it is in fact not him but your reporter who is not aware that an Erlang is a measure of traffic

The meaning of mips

YOU published a letter by Joseph Shaw (*Computer Weekly*, November 3) suggesting that the acronym mips meant million instructions per second. I have always heard this term used as machine instructions per second (except by IBM-ers), thus mips would be roughly of the same order as flops, floating operations per second, and a million mips would be one megamips.

Could you clarify exactly how the units mips and flops will be used in the future?

ROGER ANDREWS
Northampton.

The Ideal system

For many years mips meant machine instructions per second. Now that all mainframes and most minis can easily be described in terms of millions of machine instructions per second, general usage has selected that mips (or mips, as in a then mips machine) represents that. The term megamips is rarely used. Megaflops (millions of floating point operations per second) is the preferred usage. - E. Lior

Public has misfounded faith in ads

OVER many years we have become used to consumer product advertising. We expect to be harangued on the television, in the press, on the radio with requests to buy many different brands of washing powders, lagers, margarines, or the like.

Most advertising is for mature products in mature markets. The public really knows that the difference between particular brands of, for example, washing powder, is small. They all work acceptably well. The buyer knows how to use the product and approximately how much they cost.

The last two years have seen these same promotional techniques used for a newer - and rather less mature - product. It seems now that there are perhaps more advertisements for personal computers and software in the media (the television, newspapers, and the radio - than for washing powders and suchlike.

The campaigns have helped to create consumer demand. Sales of personal computers have rocketed - some estimates put growth in the last year at over 100%. Many small businesses, and many more not so small ones, have succumbed to the advertising.

The money has been paid over. The boxes have been delivered and unpacked. The shrinkwrapped packs opened and the diskettes loaded.

It's then that the buyer starts to think that perhaps the advertisement promised rather more than he actually has received. A few months later and many purchasers know what harm a limited system can really do to their business.

Personal computers - and particularly the software which makes

them work - are not yet mature products and the market quite definitely is not experienced in choosing what will best meet its requirements.

The differences between products are very great and yet these differences are in no way apparent in the advertisements. Buyers believe that one software package is very much like any other. They all work, of course!

It is also falsely assumed that any of the packages would meet buyers' particular purposes.

I believe that the buying public are regarding computer advertisements with the same faith in the product and the companies supplying them as they do for other consumer products. That faith is misfounded. The buyer then pays the price. That price can far outweigh the cost of the system. It can affect his business and, if it's performance for years to come, sometimes in a quite disastrous manner.

The evidence, that the products don't work, and that the buyer is not quite as expert as he might believe, is all around us. Why else are some of the best selling financial accounting systems for personal computers condemned by so many knowledgeable people as being limited in functions? And so much so that even the smallest business gets frustrated with their lack of functionality after just a few months?

Why is it that buyers enter Hoekyns Business Centres and demand products by name when they are unaware even of the most general features of these products?

Until the PC industry has matured we will have to accept that differences between personal

computer products are great. We should also accept that many buyers lack the skills and resources to undertake in-depth evaluations. We must also accept that buyers are susceptible to advertisements and have come to have some level of trust in them.

The industry in turn must:

- raise the standards of its products;
- institute objective and independent measurements to tell buyers about the functionality of products before they make their commitment;
- have a mature, professional and responsible attitude towards the claims made in advertisements for computer products;
- offer the right help and advice to buyers so that future problems can be avoided.

Above all, we must ensure that the multitude of new computer users do not get so disillusioned with the limitations of the new technology that they see computerisation as a whole.

There's a new research unit available at Riccarton which comes with a few inclusive extras - scientific libraries, computers, laboratory equipment and, most importantly, the human resources of a technologically powerful university.

Research and Development Accommodation.
400 sq. ft. to 7,800 sq. ft.
Heriot-Watt University Campus, Riccarton, Edinburgh.

It's on the campus of Heriot-Watt University on the west side of Edinburgh, and companies renting accommodation there will have full access to university facilities.

This means Riccarton can offer a unique opportunity to research and development groups of all kinds (no mainline manufacturing may take place).

Providing a total of 7,800 sq ft, the unit can be let as a whole, or subdivided into smaller unit sizes from 400 sq ft upwards.

If you'd like to know more, contact Property Marketing SDA, Estate Office, 102 Telford Road, Edinburgh EH4 2NP. Tel: 031-343 3361/1911.

CND has non-violent aims

A PARAGRAPH in Puzler (*Computer Weekly*, November 10) reads: "The game involves breaking into a nuclear power plant, and blowing it up. Perhaps it has a potential among members of CND."

The author would appear to be mistaken about the aims and methods used by CND. Its primary aim is to rid the world of nuclear weapons (nuclear power stations being a secondary, and only partially related issue). The methods that it uses and advocates are entirely non-violent as it believes firstly that violence runs counter to a disarmament philosophy and secondly that any use of violence, especially within one's own country against fellow citizens, would be counter-productive.

I will refrain from listing the many arguments and facts which support CND's position but will mention two that are relevant to us as computer professionals.

It seems inevitable that only extremely small systems are capable of being made error-free. Nuclear power plants and "defence"

"Disastrous potential" of nuclear power plants.

systems combine extremely disastrous potential with uncertainty, a high degree of complication and large size. They have been the location of serious accidents, red alerts in the past and by their very nature almost guarantee a worse accident in the future.

Secondly, government priorities are inappropriate for a country wishing to maintain its position in

the high technology area. The government is fulfilling its stated desire to increase defence expenditure by 3% in real terms (*Guardian*, November 7) and is greatly increasing the number of nuclear weapon carriers (planes and missiles) and warheads in this country. Meanwhile we are being told to tighten our belts.

Does Trans-Basic set back the art of programming?

I NOTED with interest your article on the language Trans-Basic (*Computer Weekly*, November 10). I have always believed that the aim of a good software engineer is to write code that (a) works and (b) is understandable. The Trans-Basic code shown might be very compact but it is not exactly readable.

For many years the aim has been to remove the mystique from programming. This language seems to be setting the art of programming

back a number of years.

The fact that GOTO scores a low point is proof that no effort has been made to structure the program.

It is really worth, for a non-real time system, the extra saving which an incomprehensible piece of code produces? After all, most of the time is taken with disc access anyway.

It is claimed that a Trans-Basic program can be developed in about

two-thirds of the time of other languages. I would be interested to know how much longer it would take in debug.

If the move is to languages such as Trans-Basic then the hopes of the Alvey Committee that the UK will lead the world in software engineering by the end of the Eighties will ever be realised.

Authority on Ada language

I MUST query Claire Gooding's implication that SDL's Perspective product justifies that company's right to be considered "the country's most foremost (sic) authority on the Ada real time language" (*Management Review*, November 10), particularly since the next paragraph appears to indicate that the product is actually a Pascal support environment.

CAP may be considered to have at least as credible a position in the

Ada marketplace, having been the first European distributor of TeleSoft-Ada, the first commercially available implementation of the Ada language.

This compiler and associated computer based learning package and embedded system development package are available now for a range of machines, including Digital's Vax and the IBM PC.

CAP is also represented on the

steering committee and a number of the specialist sub-committees of the users group, Ada Language UK, and as the leading member of the Augusta consortium has taken part in a government-funded Ada methodology study.

We take pride in our claim to be Britain's premier Ada system supplier.

ANDREW MACKIE

Naylor's expert book is really for inepters — not researchers

AS a leading publisher of computer books, we have long ago resigned ourselves to the variability of reviews. Normally, we would never quibble, simply because an element of subjectivity is bound to creep in.

But the review by Arnold Arnold of our book *Build your own Expert System*, written by Chris Naylor, was so far removed from objectivity that we feel obliged to reply.

What Arnold seems to have

failed to realise is that this book is not aimed at researchers and other high-level workers in artificial intelligence. As all other reviewers have discerned, it is a practical introduction to what, for many people, is an obscure and difficult subject.

Expert systems are, of course, notoriously difficult to define. Nevertheless, the methods used in the book have been and are still used in many substantive expert systems, which would be classified

as such by any specialist in the area. For example, one of the most well known, and most successful expert systems is Puff, which uses probabilities to diagnose certain breathing disorders. Similar methods are used in the medical diagnosis program presented in Naylor's book.

Surely, then, this book deals with genuine expert systems. Many other parallels can be drawn between other working systems and the seemingly simple ones which

are presented in the book.

The main point is, of course, that the programming required to implement a pretty reasonable expert system (one that stands at least as good a chance as being correct as a human) is moderately straightforward. The difficult part is to build up a comprehensive knowledge base by interrogating the human experts. Again, the programs in this book demonstrate the desirable feature of knowledge acquisition — so important a facet

of an expert system.

There will be those who say: "But expert systems have to be written in Lisp (or Prolog, or whatever)." This is nonsense. The availability of Lisp may make programming easier for those who are well versed in the language, but the great majority of micro users only have access to Basic.

Naylor presents all of his programs in Basic, and, as such, they may not be quite as elegant or efficient as their Lisp coun-

terparts. But that is not the point. What this book does is to provide an easy route (yes, even for those of us who "only" have secondary school mathematics) to implement simple but working expert systems on popular micros.

I am pleased to report, by the way, that the book has been adopted as a recommended text by Kingston Polytechnic.

NEWS ANALYSIS

Last week the National Economic Development Office published a user panel report. Philip Hunter examines the important lessons to be learnt

Learn how to market, suppliers

THE story is an old one. Information technology is not spreading as quickly as it might through UK industry because users and suppliers are not talking to one another. As Barney Gibbons, chairman of systems house CAP puts it: "The difficulty is getting users and suppliers in the same room without selling."

This need for talking without selling between users and suppliers is emphasised in the user panel report published last week by the National Economic Development Office (NEDO). The report — the first of a series of working papers from the Information Technology Users Panel — accuses UK suppliers of poor marketing. They are too preoccupied with technology and fail to support otherwise good products, it says.

Prices are too high, and users' opinions are not heard. The report is welcomed by Doug Eyclons, director general of the Computer Services Association, which represents companies which use hardware, but are suppliers of software and services.

Suppliers are too preoccupied with technology and fail to support otherwise excellent products

"I'm delighted that at last NEDO has approached the question of marketing," says Eyclons. "We've been pushing a similar theme for some time."

Eyclons agrees with the criticism of UK manufacturers, while carefully drawing the line between these hardware-makers and his own members, which he says would not stay in business if they didn't listen to the user's voice. The NEDO report suggests that resistance to computers would diminish if suppliers provide their manuals and guides in more straightforward English with less jargon.

Life is also made difficult for users, the report says, by the standards committees, which all too often fudge and compromise. The result is that standards are ambiguous, and riddled with options that defeat the object of having them at all.

The report was prepared by a user panel set up by NEDO on behalf of UK suppliers. Privately, some of the panel members are sorry that the tone of the report is so harsh towards UK suppliers, and are anxious to make amends in public by praising the "technical quality" of UK products.

The main core of the panel thought that too the technical side, UK companies are as good as any body," said Douglas Fraser, who represented NEDO on the panel.

The problem, says Fraser, has been, and still is, weak marketing. "Often a US company leaps in and says: 'Hey, this is the best thing since sliced bread. We're here to sort the problems out.'"

UK companies are more reticent about their products, and often miss opportunities, says Fraser, even when they are technically superior to their US rivals. Equally, vital is that systems are well supported after they are installed.

As systems become more complicated users will look more to suppliers which will support their systems and enable them to take advantage of new developments, says the report. UK firms must

convince prospective customers that they can meet these criteria, by giving more effective marketing and support.

Another result of the increasing complexity of systems is that many firms, particularly new users, will be hoping to buy all their hardware and software from one source.

Computer manufacturers cannot be blamed for not being able to supply everything from A to Z, but in the UK, too few suppliers are prepared to forge deals with companies that can fill in the gaps.

Perhaps the report is a little unfair. After all, there are plenty of examples of co-operation in the UK, and ICL has shown itself far more willing to take on board the products of software companies since the dynamic Robb Wilnot took over as managing director in May 1981.

But ICL emerges from the report's savaging of UK computer suppliers with its chin fairly high. It was crucial, the report says, that database equipment such as ICL's CAFS should be part of a standard range of equipment.

And what does ICL do the week the report comes out? It announces that CAFS is to become part of a standard range of equipment — the 2900 range.

The NEDO panel, which includes Barney Gibbons, laments the scarcity of packaged software addressed at specific applications. Many smaller organisations cannot afford the cost of custom-built software, which can be enormously expensive — some consultants charge £70 an hour for their services.

There is a need for software packages written for clearly identified subsectors of industry, says the report.

There are plenty of packages for estate agents, accountants, and other large vertical markets. Gibbons suggests that there should be similar offerings for small vertical markets like agricultural accounting. There is also a need for something off the shelf that can be readily adapted to the needs of such minority markets, he says.

The report also urges more use to be made of application generators so that users can make minor changes to standard packages without having to invest in full-time programming people.

Standards committees all too often fudge and compromise

The report suggests that some software and hardware prices should drop by a factor of five. For example, printers which provide high quality copies of things shown on a normal monochrome screen cost around £20,000. The makers of such machines should be aiming at £5,000, the report urges.

In the office the main thrust of computer technology has been towards the typist. The target should now be the management and professional sector, says the report.

The report lists several user bodies, including the National Computer Centre information technology circles. There are four circles in this group, established for the exchange of information on office technology, communications, data processing and security.

There is also the Office of the Future Information Exchange

(Ofix) aimed at small- and medium-sized organisations at an early stage of office automation.

The biggest independent user grouping (as opposed to bodies like the IBM Computer Users' Association which are users of particular makes of hardware) is the National Computer Users Forum (NCUF).

Users do not escape blame from the NEDO report. They are urged in a tone that suggests light chastisement, to shout as loudly, as often, and in as many ears as possible about standards.

The report suggests that at the moment, users only look at these standards through half-closed

eyes. It is about time they opened them, since the benefits are plenty — a reduction in the number of terminals needed to access different systems and the ability to communicate more easily with users in other organisations.

The truth is perhaps that users and suppliers are both to blame for the slow acceptance of computers, as Gibbons suggests: "Things are terribly user-friendly provided you know what the user wants."

And who is to blame if the user does not know the answer to that question?

APOLLO WHO?

Top brain quits DEC for Apollo

by George Black
ANOTHER top executive has left ANOTHER top manufacturer. Leading US micro manufacturers are preparing for a huge morale-boosting conference in Boston. Latest to leave is corporate planning vice-president, Larry Porter, who is going to up-and-coming Massachusetts neighbour Apollo Computer after 19 years with DEC.

Domain overtakes Perq in Pafec deal

The Apollo Domain has scored a further work station success with a £3 million order from Nottingham-based Pafec.

Apollo near to Cad/Cam code deals

Apollo Computer recently sponsored a 2-day engineering show in Boston, USA, at which all the exhibitors were software houses and systems builders were represented.

Apollo wins big European order

Up Apollo Computer is to supply 150 work stations to Pafec, a Nottingham-based engineering company. Under the deal, after Pafec will take 150 Apollo Domain work stations over the next two years. Apollo's biggest European order yet.

Apollo lands £3 million CAD order for Domain

Apollo Computer has won a major order for its Domain 32-bit workstation to sell the workstation.

CAD Centre takes Apollo kit over Perq

Apollo has succeeded in its bid to beat the ICL Perq as the CADCentre's choice of computer hardware, despite ICL's 40% share in the centre.

The Cambridge-based CADCentre will now sell the Apollo Domain machine and will give ICL the right to the

NEWS ANALYSIS

The budget for Europe's response to the Japanese fifth generation has already been pruned, and the whole future of the programme is on the agenda for the political leaders' meeting in Athens next month . . . John Riley reports

Esprit hangs in balance at EEC summit

THE European summit in Athens in December will determine the future of Europe's five-year IT research programme, Esprit.

Even though £60 million has been topped off its original budget of £900 million, and the programme is now snarled up in wider political manoeuvring, officials are confident it will get the green light.

Esprit, the European Strategic Programme for R&D in Information Technology, is the European Community's response to the Japanese fifth generation challenge announced late in 1981. It was masterminded by Viscount Étienne Davignon, the European Commissioner for Industry, who believes the European IT industry must pool its R&D resources to survive the threat from Japan and the US.

By European Community standards, the Esprit proposals have worked their way quickly through the European institutions. European politicians and bureaucrats as well as national governments, are all agreed on the importance of the programme and the £14 million one-year pilot programme, which got underway this summer, was proposed, agreed and implemented within a year.

In contrast the Informatics Programme took four years to get through.

But the main £840 million Esprit programme, proposed this summer and expected to proceed as smoothly as the pilot scheme, hit problems late last month. Although the technical and administrative details are virtually decided, the proposed five-year programme has become tangled up in the European budgetary crisis, and the final decision about its future will be made at the summit in Athens next month.

The European Community is funded from two sources: national governments, and from the VAT tax levied throughout Europe. It gets 1% of the VAT, but total VAT returns are declining and Community running costs are rising.

So the Community needs more cash. The UK government is against an increase in its contribution — and looks like sticking to that position.

That means the European Community will have to shave its current programmes. One solution is to reduce the Common Agricultural Programme, but the French will not buy that, and Esprit has now become a pawn in the wider bargaining game.

Just three weeks ago European ministers slashed £60 million off Esprit's proposed £900 million budget, and the UK refused to commit any cash at all to the programme until the wider budget had been sorted out.

The UK government's contribution to Esprit should be £100 million over the five years. Of the £840 million, European industry will put up half.

Germany also refused to commit cash, but that was over certain administrative details which are expected by European officials to be cleared up soon. The other eight Community countries are now

committed fully to Esprit.

The whole question will be thrashed out at the Athens summit, and well-placed officials in Brussels believe Esprit will go through after a bitter debate.

Those officials comment that the Commission can just about cope with the reduced funding for the programme, and that there has been no change to the aims or content of the programme. The timetable also remains unchanged.

Davignon, the driving force behind Esprit in the Commission, has stated that if it is necessary for the European Commission to orbitate on projects at the end of the year as a result of the overall Community budget, Esprit will be the top priority. "Only a major catastrophe will stop the programme now," confirmed one official.

The Commission believes it will be a catastrophe for Europe if Esprit is held up. The urgency stems from Europe's increasingly negative balance of trade in information technology products.

"In 1975, the European IT trade balance was \$1.7 billion in credit," says Jean-Marie Cadiou, director of the Commission's IT Task Force. "It is now in deficit by \$5 billion and that will increase to a deficit of \$9.7 billion by 1985."

Cadiou pinpoints the reasons for this growing IT trade deficit as resulting from "Europe's fragmented market, national champions leading each country's IT activities, migration of centres of innovation, shortage of skilled manpower and technology lags."

It was against that gloomy backdrop that Davignon got the main European IT companies together to sit round a table to draw up a programme for Europe's long-term R&D strategy. Those companies included ICL, GEC, Plessey, Siemens, Nixdorf, AEG, Thomson-CSF, Cii-Renoult, Bull, CIT-Alcatel and Olivetti.

"The Esprit programme does not come from bureaucrats in Brussels," explained Cadiou. "It is a grassroots programme that comes from the best people in Europe, including small companies, laboratories and universities."

The resulting programme is structured around five interrelated themes. Three of these address the key technologies which are at the core of any information technology application, and two are the key IT applications of the 1990s.

Advanced microelectronics, the technology which provides the physical structure for any information system. Work will embrace design, manufacture and testing of VLSI devices in silicon and other materials. One aim is to break the

Just three weeks ago European ministers slashed £60 million off Esprit's proposed £900 million budget, and the UK refused to commit any cash at all to the programme until the wider budget had been sorted out. DAVIGNON . . . "European IT industry must pool its R&D resources."

one micron barrier for components in integrated circuits. ■ Software technology, which controls the behaviour of any IT system. Aims are to establish standardised software interfaces, to produce an automated software environment, and to bring about change so that instead of software being labour-intensive as at present, it becomes capital-intensive. ■ Advanced information processing, which is to work out how to bring together hardware and software to make the quantum leap from today's data processing to the

The Esprit programme has its critics, especially the smaller companies, which are not happy with the 50% they have to pump. Last June the Association of the European Informatics Industry hit out at the main objections are that the programme is inadequately funded, that it makes no provision for competitive research, and that selection of projects will be politically motivated.

structured information (text, voice, graphics, images, etc.)

■ Computer integrated manufacturing, to integrate control sub-systems on to chips and study subjects such as real time sensor-based imaging and advanced components to establish a supersystem such as an electronic factory.

The 36 collaborative one-year projects in the pilot Esprit programme, announced in August, are all based on those five themes. UK participants are involved in 21 of the 36 projects, with Plessey and GEC respectively taking part in seven and five projects.

Other British companies in the pilot phase include SDL, Seicon, British Leyland Systems and British Aerospace Dynamics, as well as ICL, Marconi, Logica, STC and STL.

Universities taking part include Southampton, Newcastle, Sussex and Strathclyde and Queen Mary College London. The Polytechnic of the South Bank is also involved.

Each project funded by the main Esprit programme will focus on one of the five categories.

There are two classes of projects.

Type A are mainstream projects and will take up 75% of the Esprit cash, and will be 50% funded by the companies that take part in them.

Type B projects are high risk speculative projects in promising areas they may get more than 50% support from the Community.

For the Type A projects, at least two companies from two different European countries must take part; and while that is not mandatory for the Type B projects, international projects are more likely to get preference.

The total value of the programme will be about £840 million over the five years, of which £420 million is to be put up by industry. It compares well with the UK Alvey programme's total of £350 million and the Japanese fifth generation programme's total of £600 million over ten years, but pales somewhat when compared with IBM's annual R&D budget which is now over £1,000 million.

The Esprit programme has its critics, especially the smaller companies, which are not happy with the 50% they have to put up. Last June, the Association of the European Informatics Industry hit out at the programme for not providing enough support to small companies.

The main objections are that the programme is inadequately funded, that it benefits only large companies, that it makes no provision for competitive research, that results will not be freely available and that selection of projects will be politically motivated.

Mike Smith, chairman of software house CAP, which was involved in a pre-pilot phase of the Esprit programme, thinks funding should be 100%. "With 50% funding small companies will only participate to do things they would do anyway."

Smaller companies also regard the Esprit programme as a gravy train for the large companies, and

as a backhanded way for national governments to prop them up.

The Commission vigorously counters such suggestions. "We only emphasise and re-emphasise that selection has nothing to do with the size of the company," says Horst Hünke, who is manager of the Esprit programme, and responsible for selecting the participants in the programme.

The UK Alvey Programme is in close contact with the Esprit programme.

Brian Oakley, the Alvey Programme director, explains: "We are determined to integrate the programmes as far as possible. For example, standards work is important for the Alvey programme, but is far more powerful if conducted through Esprit."

From his vantage point Oakley sees one important benefit of the Esprit programme as long-term international co-operation. "I have sent the best laid plans in Europe are foiled by the peripatetic relationships of those in the

HÜNKE . . . "Selection has nothing to do with size of companies."

tions who have been brought up not to co-operate.

"Even if Esprit doesn't immediately solve the fifth generation problems, it will help to bring about convergence in Europe. The vital thing is that the younger researchers work together and learn that their foreign counterparts are reasonable, so that when they eventually get into powerful positions they will find it second nature to co-operate."

UNTIL NOW, ALL FLOPPY DISKS HAD ONE THING MISSING:

OUR NAME.

Good as most floppy disks are, they can never be as good as the new TDK range. TDK floppy disks benefit from more than thirty years of experience manufacturing magnetic recording tapes.

There are nine disks in the range, and each has a surface that's smooth and stable; a base that's very durable and very, very accurate; a liner that's engineered to resist changes in temperature and humidity, and a jacket that resists heat, as well as impacts.

If you want a very reliable way to record and store vital information, drop our name. TDK.

What the user needs to know about modems

Seventh in the Jensheets series by Fred Jennings of Data Logic deals with modem standards

A MODEM (modulator-demodulator) is an item of equipment which converts serial digital signals into analog signals and vice versa. Standards organisations use the general abbreviations of DCE (data circuit-terminating equipment) to describe a modem and DTE (data terminal equipment) to describe a terminal, computer, or any device connected to a modem. Therefore a modem has two recognisable interfaces:

(a) A DCE to leased line (or PSTN) 24 wire analogic interface.

(b) A DCE to DTE multi-wire digital interface.

Standards organisations refer to each wire in the multi-wire digital interface as an interchange circuit. In the case of the EIA RS-232-C interface (discussed later), the DTE-DCE interconnects appear on a 25-way 'D' type connector on the back of the modem. Interchange circuits are used for a mixture of data, control and timing purposes.

The characteristics of EIA RS-232-C interconnects are:

(a) For serial data signals, a nominal minus six volts equals a logical one and a nominal plus six volts equals a logical nought.

(b) For control signals, a nominal minus six volts equals an OFF condition and a nominal plus six volts equals an ON condition.

The CCITT (Consultative Committee for International Telegraph and Telephone) in Geneva is a part of the ITU (International Telecommunications Union). The CCITT V-Series recommendations apply to data transmission over the telephone network. They include specifications for modems, interfaces, test equipment and line quality.

The CCITT X-Series recommendations apply to data transmission over public packet switched networks such as PSS.

The following is a list of CCITT V recommendations which apply to interfaces and voice-band modems:

V10: Electrical characteristics for unbalanced double-current interconnect circuits for general use with integrated circuit equipment in the field of data communications.

V11: Electrical characteristics for balanced double-current interconnect circuits for general use with integrated circuit equipment in the field of data communications.

V15: Use of acoustic coupling for data transmission.

V21: 200 bps (300 bps) modem standardised for use on the general switched telephone network.

V22: 1200 bps full duplex modem standardised for use on the general switched telephone network.

V23: 600/1200 bps modem standardised for use on the general switched telephone network.

V24: List of definitions for interconnect circuits between data terminal equipment and data circuit-terminating equipment.

V25: Automatic calling and/or answering equipment on the general switched telephone network including disabling of echo suppressors on manually established calls.

V26: 2400 bps modem standardised for use on a 4-wire leased telephone line circuit.

V28: 4800 bps modem with manual equaliser standardised for use on leased telephone line circuits.

V27: 4800 bps modem with automatic equaliser standardised for use in the general switched telephone network.

V28: 4800 bps modem with manual equaliser standardised for use on leased telephone line circuits.

V27: 4800 bps modem with automatic equaliser standardised for use in the general switched telephone network.

V28: 4800 bps modem with manual equaliser standardised for use on leased telephone line circuits.

V29: 9600 bps modem standardised for use on leased telephone circuits.

V35: Data transmission at 48,000 bps using 60-108 KHz group band circuits (wide band).

V56: Modems for synchronous data transmission using 60-108 KHz group band circuits.

V52: Characteristics of distortion and error-rate measuring apparatus for data transmission.

V54: Loop test devices for modems.

This recommendation defines four loop tests for DTA and DCE as follows:

Loop 1 is used as a basic test on the operation of a DTE. Signals sent by the DTE are returned directly to the same DTE for checking.

Loop 2 is a loop placed on the DTE side of the distant DCE. It is formed by applying pre-determined conditions to the interconnect circuits at logic voltage levels within the DCE.

Loop 3 is a loop placed across the transmit and receive paths on the analogue line side of the Local DCE.

Loop 4 applies only to 4-wire lines and is formed by looping the transmit and receive paths at the distant end through a suitable attenuator.

The following is a list of CCITT X recommendations which apply to public data networks:

X1: International user classes of service in public data networks.

X2: International user facilities in public data networks.

X4: General structure of signals of International Alphabet No 5 code for data transmission over public data networks.

X20: Interface between data terminal equipment (DTE) and data circuit-terminating equipment (DCE) for start-stop transmission services on public data networks.

X20 bis: V21-compatible interface between data terminal equipment (DTE) and data-terminating equipment (DCE) for start-stop transmission services on public data networks.

X21: General purpose interface between data terminal equipment (DTE) and data circuit-terminating equipment (DCE) for synchronous operation on public data networks.

X21 bis: Use on public data networks of data terminal equipment (DTEs) which are designed for interfacing to synchronous Series V Recommendations modems.

X24: List of definitions for interconnect circuits between data terminal equipment (DTE) and data circuit-terminating equipment (DCE) on public data networks.

X25: Interface between data terminal equipment (DTE) and data circuit-terminating equipment (DCE) for start-stop transmission services on public data networks.

X26: Interface between data terminal equipment (DTE) and data circuit-terminating equipment (DCE) for synchronous operation on public data networks.

DATA ADMINISTRATION

Last week in the first article of this series, we described what data administration is and proposed a role for the data administrator.

In essence, data administration is concerned with the well-being of the organisation's data resource, just as personnel administration is concerned with the organisation's personnel resource.

Similarly, in the same way that most personnel administration is not done by the personnel department, so most data administration is not done by the data administrator either.

The principal role of the data administrator therefore is to advise management on all data related matters and problems. Problems of data often cross organisational boundaries and their solutions consist of technical and organisational aspects.

Because so many other departments may be involved, often at a senior level, it is not practical to give the data administrator enough authority to resolve problems directly. Instead he must be given access to authority - permission to seek out problems, propose a solution and then get together the people with authority to agree on action.

This second article discusses various aspects of setting up the data administration function.

The nature of data administration is problem-oriented. It is clear, therefore, that it must be set up to handle a number of tasks, each of which must achieve proven benefits, and meet a specific problem.

Companies differ in the data administration tasks they carry out. Some begin major data analysis and system redesign using the data dictionary as an important aid. Others decide to use the data dictionary and documentation as a strong central control mechanism.

Others again embark on major data reconciliation exercises to ensure data compatibility between systems, functions or countries. Some companies carry out only very minor reconciliation or documentation tasks.

More revealingly, companies differ in the perceived problems that trigger the activity. Impending disaster, bad past experience, cost savings, desire to keep in the technical forefront, difficulties in recruiting the right level of staff - all these are real life reasons why a data administration task is given the go ahead.

Next, companies differ in their organisation and nature. There are big differences between a large multinational with largely independent DP sections and a single-site single-DP action company, between a centralised and a decentralised company, between a government department and a manufacturing company.

Companies also differ a great deal in their style or ethos. In some, people are co-operative, in some, less so. In some, people are more interested in new ideas than others. All these factors severely condition what is possible.

Lastly comes the question of how much management commitment is possible and available. It may be that a particular company needs to carry out sweeping data administration activity, completely altering the way it operates. But unless sufficient management support can be obtained it is pointless to try to achieve this - at least at the first step. One has to operate within the limiting factor of what support is or can be made available.

Given these differences then, how should we select the first data administration task?

The first pitfall to avoid is choosing the initial task on the basis of the tools and techniques available.

Start by looking at the data-related problems. It may be that the best first task turns out to be the installation of a data dictionary. It should be because it tackles an important problem, not because "everyone is using data dictionary these days" or "we have just recruited someone who was a dictionary expert in his previous job" or whatever.

First list the likely tasks and evaluate their technical and organisational aspects. Next calculate what it is going to take to resolve those problems, the financial and non-financial cost. Then estimate what management commitment is required, and what management commitment can realistically be obtained. Finally, make the selection.

We need to distinguish between perceived problems and underlying non-perceived problems. Perceived problems are problems as they appear to the managers, not necessarily as seen by the data administrator. The need to cut staff and costs, the need to be "in the vanguard of technical and management technique usage," the ability easily to provide information required by yet more senior management, the provision of a high safety/security margin in financial institutions - these in general terms are some examples of what we mean by perceived problems.

Non-perceived problems - ones that managers have not realised or clearly grasped yet - are obviously also of great importance. But unless they can be turned into perceived problems they cannot be the basis for the first data administration task.

So, if a company has just taken over another company, there are likely to be horrendous problems in data compatibility. But the data administrator will not get support for tackling these until management can see these problems and their consequences.

Major new plans in the company should be considered. A company reorganisation, acquisition, new market area or strategy - all can put severe strains on the current data and DP. In addition, they are hot buttons, and any data administration task that can be related to a hot button is likely to be considered with interest.

Major outside events, such as new privacy legislation, should similarly be considered. These should be broken down into specific detailed problems and listed.

The next step is to see what is required technically in solving a problem; to see what it will involve and if it is feasible.

What are the technical aspects of solving the problems? What tools, techniques and activities would be required? What use would be required of data analysis or a data dictionary? Are there any other techniques or tools required? What activities would be required to analyse the problem and propose and execute a solution?

Having identified the techniques and tools, consider their availability. Do we currently have the necessary skills already in place? If not what is the realistic time needed to develop these skills? Can we learn them in carrying out the first tasks? Can we recruit or contract to get those skills more quickly? If the lead time on the skills is very long, it may be necessary to choose other tasks in order for data administration to be seen to be providing benefits quickly.

On the other hand, if those skills are considered essential to the long-term strategy, it makes sense to start acquiring them without delay.

Thus setting up an information centre could involve alterations in the way the data dictionary is used, say requiring changes to the description text to make it more understandable to non-DP people, plus changes in access, etc.

Next, and possibly even harder, is to calculate what are the organisational aspects of the problem, and of solving it. What parts of the company are involved and in what ways? What managers would be involved, with what responsibilities and reporting structures? What person or people would be needed to make decisions? What are the personalities and views of all these people?

To calculate the effects of making changes in data, it may be necessary to carry out detailed discussions at working level with various relatively junior people, to assess the possibilities and implications. Yet, because of the seriousness of the consequences, decisions will probably be required from a number of senior managers also.

The need for discussions at the various levels must be taken into account when choosing the tasks. Having identified these prob-

lems and having assessed the technical and organisational aspects of the problems, it is necessary to calculate what it will cost to solve them - what money, resources and time will each task require?

But that is only one aspect of the cost. It is also necessary to know the cost in terms of change in the way people do things, in terms of the controversy, in terms of having to get people to come together and agree conflicting requirements - it is necessary to calculate the organisational cost.

Many DP projects in the past have deliberately side-stepped or ignored organisational costs, e.g. by letting each function have its own product code or customer code. It is here that a data administration project may differ from most others - at least in emphasis. By its very nature a data administration project must face the organisational costs head-on.

Even in these days there are still some companies with money. Many of these would be quite happy to spend the time, money and resources to reconcile data discrepancies such as product or customer code. However, for many of them the cost in terms of the disruption and political embarrassment that would be required is unacceptable. One can spend money, but one cannot rock the boat. This leads on to the next consideration - management commitment.

Another cliché (like the one about data being a resource) is that data administration must have "management commitment." If it is to succeed, this is true just as the data equals resource statement is true. What does it really mean? It means the support of individual managers, individual people who are seen to be the peers of the data administrator. It means their support not just for the money, but for the disruption and controversy.

We know of an organisation where senior management caused system development to be halted while data administration set up an

environment of strong centralised control of that systems development.

This paid off handsomely for them and the same degree of control may be needed in other companies, too. Without that same commitment they would not achieve that control and if they tried, they would fail.

Clearly, you must go and try for management support. If you never ask you never get. But you will not give more until you have proved value within a given time.

Having considered the above factors, preferably writing the analysis down, you must now choose the first task. It is necessary to weigh the seriousness of the problems, the likely benefits of the possible tasks, the feasibility and probability of success.

It is also important to consider time - how long until value is proven. It is conceivable that some companies would be prepared to wait five years before, say, the data dictionary is proven to be useful.

However, most managements would not, and in any case you should choose some other task which provides benefits much sooner. Then you can gain increased management commitment and go on to other tasks which build up the data administration function.

The final factor to consider is the long term opportunities opened for data administration by the task. Thus, if the company's problems require a data dictionary or the use of data analysis, a pilot project in one of these is a strong contender. For it would pave the way for many possible future tasks which would partly depend on them.

Next week, in the final article, we will consider the subsequent stages of development of data administration, the people who should staff the function and its place in the company organisation. Richard Heagerty and Terry Smith are consultants in CACI's business information department.

PEOPLE

■ Robert Holder (above) has been appointed managing director, United Kingdom, by AT&T International, the overseas marketing unit of AT&T. He has had a 12-year career with AT&T, most recently with AT&T Information Systems, which markets equipment and services to business customers in the US. He will live in London.

■ The Council of The Royal Society of Arts announces the award of the Society's bicentenary medal for 1983 to David Maroni, who, as director of external relations for British Olivetti, has played a large part in advancing the high design standards of the Olivetti organisation in Britain. Maroni was for three years chairman of the board of governors of the Central School of Art and Design, and is currently chairman of the trustees of the Photographers' Gallery.

■ Digital Microsystems, originator of the HiNet local area network, has named Alfred (Fred) B. Pursell as director of international sales. He will be based at Digital Microsystems' Oakland, California headquarters. He was previously with Osborne Computer Corporation where he was responsible for launching the company's international sales programme and setting up a distribution network.

■ A salesman with almost 20 years' experience of office automation and business equipment has been appointed systems adviser for Hull-based Alverton Computer Systems. Harry Homer spent 14 years with NCR, 1964-78 when he became co-director of a small micro and office equipment supply company. He remained with the firm until joining Alverton earlier this year as software/system sales liaison officer.

■ Dale Atherton has been named by Tech-Nel Data Products, the Barnbury-based manufacturer of data communications management systems, as export sales administrator. He joined Tech-Nel seven years ago as a production assistant.

■ Charles P. Spector is now Apollo's president and chief operating officer. He joined Apollo in 1980, after 12 years with Digital Equipment Corp. most recently as group manager of the Manufacturing, Distribution and Control Products Group.

■ Burroughs Europe-Africa Division, based in London, has appointed Gunnar P. Heise as director of marketing. He was previously director of marketing, Office Information Systems, for the international division of Sperry based in London.

DIARY

NOVEMBER 24-25
Fault Tolerant Computing, a Xephon seminar for DP and operations managers and technical services managers in IBM installations which require systems with 100% availability. Holiday Inn, Swiss Cottage, London. £370. Further details from Mary Haines on (0628) 74922.

NOVEMBER 30
CAD Modelling seminar, Computational Mechanics Centre, Southampton. Further information on (0421) 129-3223.

■ Allmand Computer Systems has appointed to its team of banking consultants Stephen Newman who joins the company with 14 years computer experience; four years having been spent on Swift related software design and implementation in Switzerland, Germany and Belgium.

■ Stone International announces the appointment of D. Leighton Davies in a non-executive capacity to the board. Davies recently retired at the age of 55 after 14 years with Racal Electronics where he was deputy managing director of the parent company and chairman and chief executive of the Racal Data Communications Group. He will continue his association with Racal in a consultative capacity. Davies' background also includes 10 years with the Solartron Group followed by senior appointments with GEC and STC where most of his time was concerned with the industrial application of electronics.

■ Cotex (UK) the Asot-based supplier of boards and systems, has appointed Peter Russell as UK sales manager. He joins from Mostek where he was field sales engineer responsible for technical liaison with large OEMs, systems houses and other large users of microprocessors. Prior to that he was with Lock Distribution, an Oldham-based systems house which is a dealer for Mostek and other component manufacturers.

■ Datatime has appointed Joe Makin as sales manager to head its sales force, marketing Mitec PABXs, and ancillary telecommunications equipment. He has spent the past 12 years with L.M. Ericsson/Thorn Ericsson and has recently returned from an assignment as sales manager in Riyadh, Saudi Arabia. Before that he was London sales manager for Thorn Ericsson Private Systems.

■ Consultants (Computer & Financial), a City-based software house, has appointed Simon Farmer (above) as systems development manager with responsibility for development of the securities industry related products Fiscal and Tims. He joins from Centrefire, where he was responsible for systems development in the investment management areas.

■ Continuing growth at Automation and Power Systems of Brighton has led to the appointment of Tim Worley as production manager. Formerly of Redifusion Computers, he will be responsible for production activity, material control and purchasing.

■ Paul Brankin has been appointed managing director of Oxford Automation, makers of System 86, the microprocessor-based range of equipment for distributed monitoring and control of industrial processes. Dr Brankin has been with the Oxford Instruments Group since 1974 and was previously technical director of Oxford Medical Systems. Tim Cook becomes general manager of Oxford Analytical Instruments of Abingdon, and takes over responsibility for that company's activities in the manufacture of systems for industrial analysis and quality control.

■ Andrew Rodger has been given wider responsibilities within Computervision's European Support Centre in Hayes, Middlesex, since his recent return from an extensive management development programme at Bedford, Mass. He has been promoted to manager, Europe Communications, and now has corporate and strategic responsibility for marketing communications, public affairs, Press relations, user, internal and international conferences and the training of sales, support and applications engineering staff throughout Europe. He joined Computervision from the Bosch Group in 1981.

■ Counting House Computer Systems has appointed Dave O'Hara as UK sales manager. He joined Counting House as a sales and marketing executive in October 1982, and before that worked as Northern sales executive for MDSI (UK).

■ Adrian Waters, who has obtained an upper second class honours degree at Brunel University, Uxbridge, joined Redifusion Computers in October 1983 as a sponsored student and took a two-year BSc course in computer science. He will now be based in Crawley, as a programmer in the software product planning department of Redifusion Computers. Waters (left) is pictured with Gordon Peaks, technology director, receiving a presentation for the successful completion of his course.

DECEMBER 1-2
Viewdata for IBM Users. Xephon seminar for senior DP and information systems management. Berners Hotel, London. £370. Further details from Mary Haines on (0628) 74922.

DECEMBER 5
Expert Systems - the Challenge for Information in the 90s. Royal Aeronautical Society, 4 Hamilton Place, London W1. £70, or £60 for members of Ailth. Further details from Ailth, 2/251.

■ Following its acquisition by Thorn EMI, Maidenhead-based automation and robotics company Hazmac (Handling) has announced five board appointments.

■ John N. S. Deane (centre) has been appointed managing director, with Ashley Thomas (left) as marketing director and Christopher J. S. Baker (right) as finance director. All three have recently joined Hazmac.

■ The company's founders Joseph Hazleton (second left) and John MacSwan (second right) continue as executive directors. Hazleton as commercial director and MacSwan as operations director.

■ Alan Redhouse has been appointed managing director of Byetech Security Print, the Teeside subsidiary of Norton Opax of Leeds. He has been marketing director since the company opened 10 months ago. He was previously a senior sales executive with Sperry Computer Systems.

■ ICL announces the appointment of Tim Cullinane as managing director of ICL New Zealand. He succeeds Tony Neville who is returning to a senior management position with ICL in the UK. Before this appointment, Cullinane was managing director of MDS Computer Systems based in Sydney, Australia. He previously worked in Wellington, New Zealand, as general manager of the Equipment Division of Computer Consultants and was a director of that company.

■ Triela Carter has joined Anker Data Systems as product development manager, responsible for the development of new products and liaison with software houses and computer manufacturers. She was previously product support and OEM sales manager with Omron. She has also worked for ICL and Singer Business Machines.

■ Computervision has appointed Gordon Moultrie to the newly created post of marketing communications manager in the UK. He was previously with BOC, where he spent seven years in various publicity posts.

■ Geest Computer Services has named Mark Hallett as sales and marketing manager, and Rob Farrar as systems and support manager.

■ Dataproducts Corp announces the election of Glenn E. Penlsten and Jack D. Steele to its board. Penlsten is chairman of the board of American Microsystems Inc., a subsidiary of Gould, and board chairman of the American Electronics Association (AEA). Dr Steele has been Dean and Professor of the School of Business Administration at the University of Southern California since 1975.

■ Appointed managing director of Holland Automation International (UK), David Change, joins the company from Advanced Digital Office Systems (ADOS), where he was a founding director in 1980, and subsequently its managing director. Before that he was systems and programming director with Buzel Data Systems for three years. He also spent three years with Systime, and ten years with Pilkington Brothers.

■ Derek Kellett (above) has joined Redifusion Computers as a senior territory manager for the OCR sector. Previously he was with Beam Business Centres as business centre manager; 1981-1983; CMC as a territory manager 1980-1981; and Database as sales manager for three years. Brian Coote has been appointed Redifusion Computers' branch manager for the London South branch. He was previously with Wilkins Computer Systems as a director; and from 1976-82 was a salesman at IBM (UK).

■ Corporate Modelling Consultants, a specialist financial modelling systems house, has set up a new sales office in York, headed by Christine Carter (below) manager of Corporate Modelling's North of England and Scotland sales region. She has six years' experience in the computer industry, firstly in London and Brussels for ADP Network Services as a technical consultant and then as a sales executive. Her next job was with Generale de Serbie Informatique, a computer time-sharing service, and the world first in London as manager of the London sales district and then in Paris, as business development manager.

■ Newbury Data Recording has appointed John French as regional account sales manager. Before joining Newbury Laboratories in 1976, he was a sergeant in the RAF.

■ Precision Software, which specialises in software development for the Unix operating system, has appointed Kaye Matlock as senior analyst/programmer with OTE, specialising in sales order entry work on the Data General Eclipse range. She also spent two years with Leasco Software again as an analyst/programmer involved in development work.

■ Michael O'Connell, has been appointed national sales manager of the newly-formed British Systems Division of Chubb Cash Registers. He was a service engineer with Gross Cash Registers at the time of the Chubb takeover.

■ Alan Steere has joined Matercare as materials manager. He was previously sales manager at Filachi in the UK and prior to that materials manager at Dixon Photographic.

■ See pages 32-33 for this week's new products.

THE RICHARD PICK AWARD

Not many people have an operating system named after them. Richard Pick has, and as the originator of the multi-user operating system that bears his

name, has been called a technical wizard. His Pick operating system (known as Pick) has numerous devotees but it has only recently started to win over and

attract a wider following. To stimulate interest in Pick, Electronic Data Processing (EDP) of Sheffield, one of the earliest large scale users of Pick, is offering £3,000 in

price money to the individual who can best explain the merits of Pick. A review of Pick, and details of the competition, and a coupon are set out below.

Pick out Pick's merits and win a £1,500 prize

LISTENING to many Pick users is like listening to people who have undergone a religious conversion. The enthusiasm is tangible. There are installations worldwide and approximately 1,000 in the UK yet many data processing managers are unaware of the Pick system and its attractions.

Vendors, despite impressive user lists, have not been successful in gaining for Pick the market recognition which, for example, Unix has achieved. Only in recent months, with the entry of numerous new Pick vendors, has interest begun to burgeon.

To heighten the interest and promote Pick awareness, Electronic Data Processing (EDP) of Sheffield, which has the exclusive distributorship for the Mentor implementation of Pick, is offering £3,000 in prize money to winners of what it calls the Richard Pick Award. See details in the panel on this page.

The Pick operating system has its beginnings in the early 1960s but it was not until the early 1970s that the first commercial implementation was completed. The Microdata Corporation had a process control computer, and saw an opportunity to increase the market for its machine by implementing Pick and turning it into a business system - the Reality.

It was marketed in the early and mid-1970s by Microdata's then agent company in the UK, CMC. Microdata gained substantial numbers of users worldwide, and made Pick users eager for more diverse systems. Those users with the largest investment in Pick application software - mainly US based Microdata dealers - began to seek alternative hardware on which Pick could be implemented.

One of the first was a Prime system called Information. It was not produced in conjunction with Pick, and is consequently somewhat at a tangent to mainstream Pick. Information also requires the presence of the Primes operating system, and therefore a large machine to run even a few terminals, and has not to date sold in large numbers.

Much more successful has been the implementation of Pick on Honeywell Level 6/DPS6 by the Ultimate Corp. Ultimate was formed by a number of former Microdata dealers.

Level 6/DPS 6 hardware architecture, however, is actually more powerful than the Pick operating

system requires. This caused a number of manufacturers to believe that a machine built specifically to run Pick could be brought to market at much less cost than Ultimate.

The first of these was Applied Digital Data Systems Inc. (ADDS), a wholly owned NCR subsidiary, which launched its Mentor family in mid-1981. ADDS appointed EDP as its UK distributor, and Mentor was launched here in September 1981.

Other Pick implementations have followed in rapid succession. Ultimate responded with its 1000/2000 range. Datamedia, General Automation and Persee have all recently introduced versions, and there are now no less than three implementations on IBM equipment - the PC, Series 1 and 4380 models.

Pick enables multiple users to enter, instantly retrieve and update any information stored in the online database. Users interact with the system via local or remote terminals, accessing files that may be private or shared. The highlights of the systems are:-

■ A virtual memory operating system which permits addressing of disc storage and allows main memory to be dynamically assigned.

■ A database management system which is an integral part of the O/S and provides an extremely high level of performance.

■ Data storage in a three dimensional variable length format which may vary dynamically in size, making it exceptionally easy to change the size of or add data to a file.

■ A hierarchical file structure providing efficient disc utilisation, fast data access and selectable levels of data security.

■ Record access directly via the item-id, sequentially using a hashing technique or in sorted sequence.

Many systems now boast user-friendly report generation tools, but few match the Pick query language, variously termed English, Recall, Access, Info, and others. English is a dictionary driven database enquiry language with free form syntax, simple enough for non-programmer to use, yet powerful enough to allow the instant generation of almost any kind of report from the database.

The main programming language is Data Basic, which is an expanded subset of Basic.

THE RICHARD PICK AWARD

1ST PRIZE £1,500

2nd PRIZE £750

Next best five entries - £150

The prizes will be awarded for original essays of 2-4,000 words which describe in layman's terms the benefits of the Pick operating system to the end-user. Competitors must be currently employed at a Pick user site or have been employed at a Pick user site at some time between now and January 1, 1984. Employees of EDP, Computer Weekly and DMW are not eligible.

Closing date for entries is January 27, 1984. Entries will be judged by James Martin, DMW Group chairman and an internationally known consultant on

database systems, M. I. Jamieson - EDP technical director, and The Editor, Computer Weekly. Please clip the coupon for an entry form.

Please send me full details of the Richard Pick Award:

PICK... Called a technical wizard.

The Computer Trade Show '84

"Where the professionals meet"

Wembley Conference Centre March 13-15

Open 09.30-17.00 daily

If you want to talk to buyers then The Computer Trade Show '84 is the certain way of reaching an audience of the highest quality. Only bona fide trade visitors are admitted to the show and at the last exhibition 3,653 trade buyers came to The Computer Trade Show. Such people are serious business buyers, with 41 per cent of 1983 visitors involved in computer/WP systems distribution and 26 per cent looking for OEM equipment for systems integration.

This impressive audience attends The Computer Trade Show because of the guaranteed quality of the show. Held near the centre of London at the modern Wembley Conference Centre with its sophisticated businesslike atmosphere, it is staged by the country's largest exhibition organiser, Reed Exhibitions. Sponsors of the show are Computer Weekly, Systems International, Software, Practical Computing and Micro Business.

A prestigious conference programme held in conjunction with the show is certain to attract wide media coverage and professional visitors of a high calibre. With important industry issues discussed in depth, the conference will be the talking point of the year in the trade. For further information contact Christine Jones. Tel. 01-643 8948.

With this kind of backing it is no wonder that an important number of computer companies, like Digital Equipment Corporation, Perkin Elmer, Roda, Norsk Data, General Automation, Redifusion, Geveke, Newbury Data and Multicomputer, have already booked stand and space at the show. So you want to be sure of meeting thousands of business buyers with bulk purchase at the forefront of their minds you must reserve your stand space at The Computer Trade Show '84 by clipping the coupon below, or better still phone Gillian Johnson on 01-661 3125 NOW!

I am interested in exhibiting at The Computer Trade Show '84. Please send further information. I am interested in visiting. Please send me a visitor registration leaflet.

Take two days to determine your IT strategy

The Information Technology Planning Conference 1984

**Royal Lancaster Hotel, London
7 and 8 February 1984**

This unique conference is the first-ever meeting expressly designed to provide information systems management with clear, factual data on the short-term planning implications of present trends in IT.

It is also the first-ever conference organised by, and backed by the unequalled resources of, the National Computing Centre, Computer Weekly, and IDC Europa.

Know the directions IT will take.

Over the past months, a conference committee has discussed the needs of managers like yourself, and invited the most expert and knowledgeable people to contribute.

The result is a heavyweight speaker participation, able to draw upon the prime sources of information from the NCC, Electrical-Electronic Press — publishers of Computer Weekly and other leading computer journals and the organisers of Compec — and IDC's own renowned research data.

Plan IT84

The Information Technology Planning Conference 1984
Royal Lancaster Hotel, London
7 and 8 February 1984

Be fit for the future.

Attendance at the PLAN IT84 event is essential for both information systems professionals and managers charged with responsibility for IT.

The two-day conference will be structured

as detailed in the outline programme. Full information on the speakers and their topics is available on request, and will be sent to all attendees upon registration.

Early registration ensures your participation.

The PLAN IT84 conference is the only effective way of determining the real practice and theory of information technology for your organisation.

The alternatives — desk research, a multitude of less comprehensive meetings, a dozen or so wearisome exhibitions, and time spent with equipment suppliers' representatives — cannot be as efficient or as definitive as this PLAN IT84 conference.

For only £365 for each delegate, you will be party to the very latest, and most high-level, informed opinions in Europe. You will be able to assess and decide upon a plan of action to meet your company's future requirements directly as a result of your attendance at PLAN IT84.

And the opportunity to meet and discuss other senior information systems people at such a resourceful and independent event cannot be underestimated.

Trends leading to directions leading to industry standards.

Above all, PLAN IT84 is a forum that will produce results — for consideration, costing and implementation. £365 spent on your attendance will enable you, and other information systems management, to meet your immediate needs and develop your strategic plans.

Register now for PLAN IT84 — the Information Technology Planning Conference 1984 — using the advance registration form

SAUDI ARABIA IBM PL1 SPECIALISTS £32,000-£45,000p.a. Tax Free

Systems Analysts/ Scientific/ Analyst Programmer

Candidates should either have a B.Sc. Engineering qualification with a minimum of 4 years D.P. experience or 7 years related job experience with 2 years as an Analyst.

Experience in PL1 programming is essential and candidate should be able to demonstrate sound knowledge of some of the following skills:

SPF, OS, JCL, TSO, Project Development Methodology, Parvalet Program Management, IBM Utilities, Flow Charting - Data Flow Diagrams, (SPF) Dialogue Manager, Structured Programming Techniques, Documentation Writing. The ability to liaise with users to define maintenance and development projects through to implementation with minimal supervision is essential.

These positions will be offered on a 1 year renewable contract basis with leave entitlement every 16 weeks. Interested - then call Knight on 01-491 4706 quoting ref NW990. Alternatively, complete and return the attached coupon.

Systems Analysts - Training

Candidates must be specialised in training in PL1, Fortran, TSO/SPF CMS in an IBM environment operating under MVS/JES2 and/or VM.

In addition, a sound knowledge of the oil industry and the ability to communicate effectively is essential.

Systems Analysts

Candidates should either be degree qualified with 5 years IBM D.P. experience or a minimum of 8 years IBM D.P. experience. A sound knowledge of MVS, VM, SAS, TSO/SPF, PL1 and/or Fortran is desirable. Previous experience either as an instructor or working as a member of a project team is an advantage.

Senior Systems Designer/Programmer

Hertfordshire

£14,500

J.G. Systems Ltd is a highly successful Systems House engaged in the development of a wide range of commercial applications, packages and tailored software. The company also provides consultancy at Systems Design level based on CTL mini computers.

The Senior Systems Designer/Programmer will be responsible for the design, programming and implementation of commercial software and packages, and providing support and maintenance of that software. Additional responsibility will be for the management of a project team.

Candidates should be able to demonstrate experience in the following disciplines:

- * 4 years Programming/Design of on-line Transaction Processing systems
 - * COBOL programming
 - * Accounting, Stock and Purchasing, Order Entry systems
 - * Mini computers (CTL an advantage)
- J.G. Systems use their own CTL 8020 and CTL 8048 computers to provide in-house software development and customer support. Find out more - contact Knight on 01-491 4706 quoting ref YY401.

Senior Analyst/Programmer

N. London/Essex

£12,000

Ozalid UK Ltd is one of the UK's leaders in design engineering reprographics and is part of the International Oza Group.

The company operates an extensive national network, encompassing a vast range of on-line applications, linked to their Honeywell Level 64 DPS8 computer running under GCOS. Significant developments are in hand to cover all the company systems including Manufacturing, Distribution, Warehousing, Marketing, Sales and Finance.

To continue their expansion policy, Ozalid wishes to appoint a Senior Analyst/Programmer (reporting to the Systems and Programming Manager) to lead one of the system teams through all aspects of development and to enhance and maintain existing systems. Candidates will be self motivated, have the

confidence to liaise effectively with all levels of management and have experience in the following:

- * 5 years plus commercial OP
 - * 2 years analysts/design
 - * Cobol programming background
 - * Honeywell mainframe experience desirable (not essential)
- Find out more - contact Knight on 01-491 4706 quoting ref YY400.

Systems Manager - New Zealand

Start the New Year with a new lease of life in a country that offers beautiful scenery, a pleasant climate and varied social interests. A part of a British international group, our client is a major industrial company located at Wellington.

Plans are underway to provide state of the art Data Processing facilities to all areas of the organisation with the proposed installation of dual Data General MV8000 computers. This will involve the redevelopment of their main applications areas - Financial, Manufacturing and Distribution and include on-line processing facilities.

The Systems Manager will report to and deputise for the Computer Services Manager and will have direct responsibility for co-ordinating the successful implementation of the company

systems as well as managing and controlling all stages of projects from feasibility through to completion.

Candidates, ideally in their early 30's should be able to demonstrate proven managerial and technical qualities. This position would suit an experienced member of a similar sized installation or a Senior Project Leader of a large computer department.

In addition to a competitive salary, the successful candidate will be offered a benefits package that includes a company car, medical insurance, telephone rental and pension scheme.

The interviews will be conducted in London in early December. So, don't delay - contact Knight on 01-491 4706 quoting ref GK620.

IBM 4381

The following expert staff are required to form the technical nucleus of the newly-expanded Computer Department of the Royal Oman Police. Micro, minis and word processors are already in use and an IBM 4381 is on order. The Royal Oman Police is an expanding and progressive Force with wide-ranging responsibilities including Customs and Immigration.

A) TECHNICAL SUPPORT MANAGER

Minimum of eight years' IBM experience of which at least five years must have been in an IBM software support role in an online, real-time environment using MVS, TSO, IMS, CICS and JES2. Thorough knowledge of this software and Assembler required. SNA an advantage.

B) DATABASE ADMINISTRATOR

Minimum of eight years' experience of which at least three years must have been spent as a database designer or database administrator in an online, real-time IMS/CICS environment. Must have been responsible for the design and implementation of at least one large and complex IMS/CICS database.

C) PROJECT LEADER

Minimum of eight years' IBM experience of which at least three years must have been as a chief systems analyst or project leader in an online, real-time environment using MVS, TSO, IMS, CICS, JES2 and COBOL. Database design experience an advantage, as would be a knowledge of SNA and PL1.

D) OPERATIONS MANAGER

Minimum of eight years' IBM experience of which at least three years must have been as an operations manager in an online, real-time environment using MVS, TSO, IMS, CICS and JES2. Experience in installation planning an advantage, as would be a knowledge of SNA.

These appointments are offered on contract terms of service for an initial period of two years. Conditions of service include tax-free annual emoluments of the equivalent of approximately £18,750 of the current rate of exchange, and normal benefits associated with working overseas including furnished air-conditioned accommodation, car and medical treatment, with 60 days' leave per annum and an end of contract benefit equivalent to 25% of the basic salary.

Applications with detailed curriculum vitae attached and two recent passport size photographs should be forwarded, not later than 15 December, 1983, to:

Inspector General of Police and Customs
Attn: Assistant Inspector General (P&T)
Royal Oman Police, PO Box 2, Muscat, Sultanate of Oman

(16558)

THE SERVICES SOUND AND VISION CORPORATION

ANALYST/PROGRAMMER

To meet our expanding computer installation we have a vacancy for an Analyst/Programmer. Experience of Honeywell TPS and Screen write or Database is essential. Cobol and online system experience would be an advantage.

Main objectives would be to direct and co-ordinate the investigation, design and introduction of data processing procedures to meet required business needs.

Working conditions are excellent. Salary c. £10,000 per annum. Good Pension and Life Assurance Scheme is available. Free Lunches are provided and there is an Asseled Travel Scheme.

Applications in writing are invited from Programmers with at least two years' experience.

Apply to:

Mrs A. R. Sive
The Services Sound and Vision Corporation
Chalfont Grove, Narscot Lane
Gerrards Cross
Bucks GL8 5TN

(16544)

COGENT SYSTEMS LIMITED

HP3000 PROGRAMMERS

COGENT Systems Limited is a software house which specialises in projects on the HP3000 and on microcomputers.

We currently need more programmers for our on-line projects in North Herts and Bucks. A minimum of one year's experience of COBOL, IMAGE, QUERY and VIEW on the HP3000 is required. These jobs are excellent opportunities both to broaden and to consolidate your experience, working with extremely competent analysts/programmers in an exciting and go-ahead environment.

We pay top salaries.

Write in confidence with details of your experience to:

Mr Robert Green
COGENT Systems Limited
251/253 Finchley Road, London NW3 6LS
Tel: 01-794 0179/794 0170 (24hr)

EDUCATION DEPARTMENT MONKWEARMOUTH COLLEGE OF FURTHER EDUCATION DEPARTMENT OF SCIENCE AND TECHNOLOGY

LECTURER I IN COMPUTING £5,849 - £9,735

Applicants should possess suitable qualifications in Computing, together with appropriate teaching experience, or experience of computers in business.

Outlets to commence 1st January, 1984, or as soon as possible thereafter. Application forms and further details available upon receipt of a stamped, addressed envelope from the Principal, Monkwearmouth College of Further Education, Swan Street, Sunderland, SR6 1EB. Closing date for applications: Friday, 2nd December, 1983.

(16571)

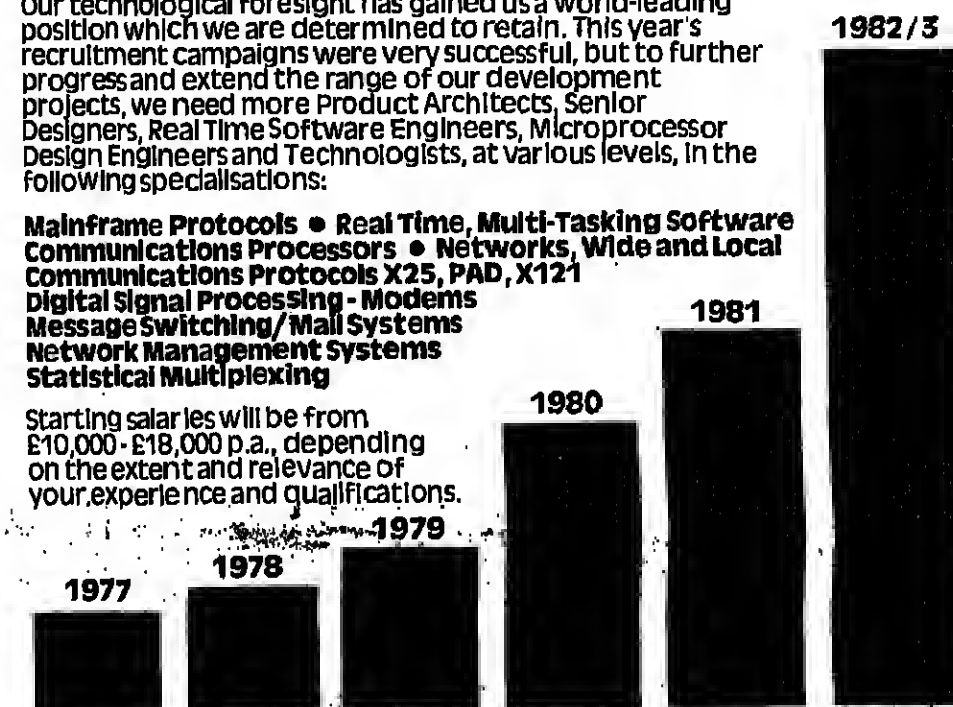

borough of
sunderland

Twice this year we've advertised for Development Professionals. Twice this year we've successfully recruited the people we were looking for. - So, why are we doing it again?

Our technological foresight has gained us a world-leading position which we are determined to retain. This year's recruitment campaigns were very successful, but to further progress and extend the range of our development projects, we need more Product Architects, Senior Designers, Real Time Software Engineers, Microprocessor Design Engineers and Technologists, at various levels, in the following specialisations:

Mainframe Protocols • Real Time, Multi-Tasking Software Communications Processors • Networks, Wide and Local Communications Protocols X25, PAD, X121 Digital Signal Processing - Modems Message Switching/Mail Systems Network Management Systems Statistical Multiplexing

Starting salaries will be from £10,000 - £18,000 p.a., depending on the extent and relevance of your experience and qualifications.

The increased scope of our activities, and the investment we make in R & D, means we can confidently predict continued growth, and thus your rapid career progression.

Call Chris Burns, our Personnel Officer, on (0923) 33500. Ask to speak to one of our development managers in your area of specialisation. Or arrange a time to visit our office, and see for yourself how far in advance we are. Alternatively write, for further details, to him at:

CASE Computer and Systems
Engineering PLC, Caxton Way,
Watford Business Park,
Watford, Herts. WD1 8XH.
You'll be convinced that the future lies with CASE.

PROGRAMMER/ANALYST

£9,500 + BONUS

A forward thinking firm of solicitors require a go-ahead individual to join their small DP Department and to play an important role in the continued development and maintenance of the on-line systems. The successful applicant will have had a minimum of two years' COBOL experience in an on-line environment, preferable with experience of Honeywell Level 6. Relocation expenses will be paid, where necessary.

Please write enclosing full cv to:

Program standard EPROMs

WITH the new PMS-8100 portable programmer, Siemens claims to offer the user a universally applicable, low-cost, portable unit for programming standard EPROMs. The compact, easy-to-handle programmer is suitable for laboratory use in conjunction with Siemens' PMS-T85S testing and development system.

The EPROM programmer is intended to be used as an extension of the Siemens SMP microcomputer expansion board system. The EPROM type and the required commands are entered via the programmer's keyboard. The repeat key provided can be used to enter repeat commands.

The current configuration of the PMS-8100 allows the programming of six EPROM types (2516, 2716, 2732, 2732A, 2764 and 27128). Four minutes is the programming time for an SAB 27128, including the implementation of a high-speed programming algorithm.

This programmer is housed together with its swappable power supply (100/220V, 60/50Hz), in a

The PMS-8100 is easy to handle.

metal case. Typical power consumption is 19VA at an ambient operating temperature of 0-40°C. The unit measures 253x175x75mm and weighs

2.5kg. Siemens (CW), Siemens House, Windmill Road, Sunbury-on-Thames, Middx. TW16 7HS. Tel: (09327) 85691.

Transmit voice with data at the same time

SOFTWARE Science is marketing the Datavoice data communications system, which provides simultaneous voice and high speed data transmission on existing PABX lines.

The Datavoice was developed and manufactured by A/S Elektrisk Bureau, a Norwegian telecommunications specialist. Software Sciences practically has worldwide distribution rights to the product.

The Datavoice simply plugs into the standard British Telecom telephone socket, enabling telephones and data terminals to share that single telephone line.

Speech and data are transmitted from the subscriber on the telephone line to the PABX room where another Datavoice station unit is placed, to separate the speech from the data.

This unit can be supplied in a similar box to the subscriber unit, but for larger users, a 19in magazine containing up to 10 station units plus power supply is available.

able. Five magazines can be mounted in a cabinet, and more cabinets can be added if required.

Datavoice gives full duplex high speed transmission of data up to 19,200 bits per second, in asynchronous or synchronous mode over a two-kilometre radius without affecting the normal functioning of the telephone or PABX, says Software Sciences.

The number of data terminals that can be connected through Datavoice is unlimited. A user can start with a single point-to-point Datavoice connection and add new subscribers according to requirements.

Mike Shone, managing director of Software Sciences, says: "We anticipate a large market for the Datavoice, which can solve a lot of problems."

"For example, installing data terminals, or moving them round the office, traditionally incurs expensive cabling - there is no such cost with Datavoice."

"And if you move offices, you simply take your telephone, terminal and Datavoice connection with you and plug them in at the new site."

"Secondly, the architecture of an office building may make conventional cabling impossible, but Datavoice will create a local area network anywhere that has an installed PABX."

The Datavoice is one of Software Sciences' range of office automation products, which also includes the Xionics set of integrated communication systems.

Software Sciences is one of the UK's leading systems and software houses with more than 12 years' international experience of advanced software development and effective implementation.

The company has over 600 professional staff and is part of the Thorn EMI information technology division.

Software Sciences (CW), Abbey House, 282/292 Farnborough Road, Farnborough, Hants. Tel: (0252) 544321.

PRODUCTS

Designed with travel in mind

A MULTIBUS-compatible industrial portable computer (IPC) for single-user, multi-tasking applications in industrial and scientific environments is being marketed by Arrow Computer Services. The unit, ruggedly packaged in a metal casing, is designed with travel in mind and fits under a standard aeroplane seat.

Manufactured by Monolithic Systems and designated the MSC8807, the IPC incorporates the Intel iAPX 186 processor. The system is forced air-cooled and includes a 9in screen, two 3.5in (Sony format) microfloppy disc drives each with 409 Kbytes formatted storage capacity, six-slot Multibus chassis, and a 100w power supply.

Three of the Multibus slots are taken up with systems boards, and the other three are available for expansion. An 83-key ASCII detachable keyboard is contained within the lid. The keyboard has a numeric keypad and 10 special function keys.

A control panel under the screen

Monolithic Systems' MSC8807 marketed by Arrow.

contains power and system-reset switches, and a screen-brightness control. The rear panel contains I/O connectors and AC input/output connectors.

The three spare Multibus slots mean that Multibus-compatible devices such as expansion memories, controllers and high resolution graphics, can be added to the IPC without modification. Both 8- and 16-bit devices with up to 24 address lines can be used. Additionally, an on-board iSBX

Bull launches 90 pages a minute printer

BULL Peripherals UK has introduced what it claims to be the first high-speed magnetic printer commercially available to the OEM marketplace. The MP6090 performs at a speed of 6,000 lines per minute (90 pages-per-minute) and uses perpendicular recording technology to produce 240x240 dot resolution.

Designed and manufactured in France by Bull Peripheriques, the MP6090 is the first of a family of non-impact printers which will use virtually identical components.

Three primary Bull proprietary technologies are employed by the printer: A magnetic drum used in conjunction with perpendicular recording heads, and a single-component magnetic toner.

In operation, the magnetic recording heads record information on the magnetic drum. The drum rotates through the single-component toner, which is attracted to the magnetised regions

on the drum. The toner, and thus the information, is then transferred to continuous fanfold paper by a pressure-roller.

The MP6090 has been designed to allow the operator to perform scheduled head cleaning. Planned maintenance by trained personnel has been reduced compared to competitive high performance non-impact printers.

The system is offered with a line printer emulation capability which permits standard line printer formats, using multiple fonts in both landscape (horizontal) and portrait (vertical) directions.

The MP6090 uses blank or pre-printed fanfold paper, 7in to 15 1/2in wide. Standard features include from 10 to 15 characters per inch, with 90 degree page rotation and 6x10 lines per inch, four sets of 96 characters.

Bull Peripherals UK (CW), Kingswick House, Sunninghill, Berkshire SL5 7BL.

THE Scimitar Super 3104 Electronic is a new general office shredder which can handle more than 10 streams of continuous stationery, and doubles as a data shredder. It is introduced by Business Ads. Tel: Sunbury-on-Thames 81758/9.

Choice of 128 styles

THE versatile Epson RX-80FT matrix printer, now available from peripherals specialist PHL of Solihull, has many new features, of which perhaps the most impressive is the selection of 128 character styles. Printing speed is 100 to 300 cps for high throughput, or 50 cps in quiet-mode for office use.

Sub- and superscripts and underline are available. There are six programmable bit-image graphics modes, which can be mixed in any combinations on a single line.

The RX-80FT has both friction and tractor feed, accepting pin-fed paper from 4in to 10in wide, and cut sheets and rolls up to 8 1/2in. A Centronics interface is supplied as standard, with a range of other interfaces including IEEE488 and RX-232C available as options, allowing connection to almost any system.

Peripheral Hardware (CW), Unit 13, Monkspath Industrial Park, Highlands Road, Shirley, Birmingham, B90 4NY. Tel: 021-745 3033.

Sharing resources

THE DRSS data route selector made by Aims of Milton Keynes allows micro and other data processing equipment to share resources at the turn of a switch.

This top-of-the-range model costs £96 plus VAT and allows one common cable to be switched to any of four other data routes.

The DRSS uses industry-standard RS232 female sockets, but the Aims range of data route selectors also includes models with IBM-compatible female co-axial sockets.

Aims (CW), 25 Potters Lane, Kila Farm, Milton Keynes MK11 3HG. Tel: (0908) 562953.

The Aims DRSS data route selector.

CYNTHIA D 500 DISC UNITS:

The Cynthia D 500 range of 5 1/4" disc units, with six models from 6 to 72 Mb, offers the right capacity and performance for all applications:

- The Cynthia D 505 and D 510 units are

intended for all existing microsystem applications, with capacities of 6 and 13 Mb and a standard access time of 70 ms.

- The Cynthia D 520 unit, which consists of two discs, one fixed and one removable, has a capacity of 13 + 13 Mb. It is one of the first units of this type introduced on the OEM market. It is both a mass-storage and an operating unit, with an average access time of 40 ms.

CONTINUITY.

- The Cynthia D 530, D 550 and D 570 units have an exceptional storage capacity - 31, 51 and 72 Mb - in a 5 1/4" standard volume and a very short access time of 30 ms. They are intended either for large memory applications, or for multitask or multiuser applications.

From the Cynthia D 505 up to the Cynthia D 570 unit, you'll get the same reliability, a full compatibility, and standard interfaces.

Such a continuous line of products means that the Cynthia Peripheral Division will remain your dedicated partner and will follow your growth: available today, it is already your tomorrow solution.

The model 1030 editing keyboard.

Keyboard lets user sit back

PHILIPS has introduced an editing keyboard for viewdata terminals, the model 1030, to replace the model 1039.

The new model retains all the features of the 1039 - standard layout, separate numeric pad, graphics and colour keys - plus a number of new features.

The 1030 permits full operation of the Philips 3607 viewdata terminal, without the need to use the terminal's keypad. This allows the user to sit back and concentrate on the keyboard alone.

The Philips 3607 has 14 pages of

memory which can be used for preparation of response frames and mailbox messages off-line.

A line hold facility gives the user of the 3607 the ability to use the off-line features of the terminal, whilst maintaining connection to the viewdata computer. This allows last-minute changes to pages, for example, before or during transmission of information on-line to the computer.

TMC (CW), Philips Systems Division, Philips House, 100 Broad Street, London EC2M 4EE. Tel: (06662) 2121.

The Seagate ST212 12Mbyte half-height Winchester drive

12Mbytes on a disc

DESCRIBED as the first single-platter 12 Mbyte half-height 5 1/4in Winchester disc drive to incorporate low-mass inductorless ferrite read/write heads for improved shock protection and increased track densities, it is announced by Seagate.

The ST212 is designed for portable computers and desk-top

systems, and will withstand almost twice the shock specification of standard-height drives.

It operates at an average access time of 65ms.

The drive is priced at \$690 in 1,000-lot quantities. Single unit pricing is \$1,265.

Seagate Technology (CW), 920 Disc Drive, Scotts Valley, California 95066. Tel: (408) 438-6550.

3 YEARS SYSTEMS AND 2 YEARS PROGRAMMING EXPERIENCE?

Develop the standards for our next generation of DP systems...and your career

Around £14,500

Central London

Sainsbury's is the UK's leading food retailer. Our half-yearly results showed a sales increase of 15.2%, profit was up 28.3% and six new supermarkets were opened during the period. Annual investment this year is expected to reach £175m.

Our Systems Department is vital to our on-going success and is rapidly expanding to satisfy business growth. We are currently changing from ICL to IBM hardware and our present configuration comprises IBM 3033 and Atlas 10 mainframes.

To maintain rigorous quality assurance standards and provide a basis for the future, we are introducing a new systems development methodology and new technical standards to support it.

The vital importance of these standards has been recognised by the creation of the new post of

STANDARDS & METHODS CO-ORDINATOR

As the "custodian of technical standards", your prime responsibilities will be to co-ordinate the introduction of the new methodology and train staff in its use; develop, implement and maintain the system standards and design and implement the supporting documentation.

You should have at least 5-6 years' programming and systems experience plus a real interest in training and the development of professional DP standards. Good communication skills, a "hands on" approach and the ability to carry ideas through to fruition are essential. An O & M background could be useful. Career prospects are attractive in a rapidly developing environment.

Excellent benefits include:

- interest free season ticket loan, after six weeks
- subsidised restaurant
- profit sharing after 2 years' service
- share option scheme after 3 years' service
- BUPA
- pension scheme
- relocation assistance, where appropriate

SAINSBURY'S
Further excellent growth.

The unaudited interim results for the Group were			
	1983 26 weeks to 9th October	1982 26 weeks to 9th October	Change
Sales*	1,359,897	1,179,988	+15.2%
Retail Profit	69,314	48,246	+28.3%

Interested in developing our standards and your career...then please telephone Loraine Cathersides on 01-921 6047 for an application form or forward a detailed c.v. to her at J. Sainsbury plc, Wakefield House, Stamford Street, London SE1.

DESIGN - DEVELOPMENT - SUPPORT

Junior/Senior Appointments £8000 to £20,000

Modus has a complete range of opportunities spanning the entire U.K. At one end of the spectrum there is an opening for a good junior to become involved in one of the most complex LANs currently under development in the U.K. - going to the other extreme, one of our clients wishes to recruit a Technical Director capable of taking a MC68000 based system and turning it into a highly profitable product. These are all REAL jobs and we are determined to fulfil our client's requirements. We welcome your call. An initial chat with a Modus Consultant will be extremely useful in identifying a company, or group of companies, ideally suited to your specific requirements.

There are some terrific jobs out there -
just waiting to be taken by the right person.
It could be you...

CAD Systems Engineer

Berkshire

to £13,000

MARS ELECTRONICS One of the fastest growing electronic groups in Europe, renowned for its technical excellence within the markets it serves, is introducing one of the most advanced CAD systems into its head office at Winnersh.

To assist with this introduction they are looking for a computer professional who will interface between the users and the computer system and provide technical back-up on a day to day basis.

Applicants will have an engineering background together with a strong bias towards software. Experience of Portran, PLOT or PLM gained on 32 bit computers would be an added advantage.

Candidates will be able to implement system management procedures, advise users on queries or problems and develop and streamline their working techniques.

It is essential that you have good communication skills and have a positive attitude to CAD.

The company has extensive plans for future development of Computer Aided Engineering therefore long term career opportunities are excellent.

Please contact David Hendry

Copp House, 96d South End,
Croydon CR9 3SD.
International & UK
Recruitment Consultants

Our client is looking for two technically competent Systems Programmers who want to develop their skills in a mainstream IBM software environment.

The company has an IBM 4341/2 processor running under VM and OS/VS1, with CICS, DL/I, APL, ROSCOE & UFO. Early next year it will implement MVS in readiness for a processor upgrade and network support under SNA.

You should have at least 4 years' IBM DP experience and 18 months minimum as a Systems Programmer with in-depth knowledge of VM or VS1 or CICS. Experience of MVS would be an advantage for one post.

A competitive salary will be offered, based on experience, as well as ample training and a good benefits package expected of a large company. For further information, please write or telephone (24 hour answer service) quoting ref. CW103-3D. Applications are invited from either sex.

Computer Personnel Excellent Career Opportunities

Our Clients are one of the leading software houses in the country who also have a thriving systems sales division. They have an excellent growth record since their formation four years ago and envisage continued growth in both the UK and the export field, in which they have a first class reputation. To assist in their growth they require the following personnel:

Sales Manager/Sales Director Designate WMC/CRS/428

The company have several dealerships with top quality hardware manufacturers which they market as a complete system using their own software, to a variety of small and large businesses. Your role would be to develop and expand the already established business.

Aged 28-40 you will have a sound track record in the computer hardware, software or related fields and have the potential to become Sales or Managing Director in a short space of time.

Project Leader WMC/CRS/429

The Project Leader will be responsible for supervising a team of programmers, who are taking ideas from inception to finished product in the areas of graphics, data base systems, languages and general commercial systems as well as undertaking a practical role yourself.

Aged 25-35 you will have several years experience as an analyst or systems designer in a mini or micro environment, BASIC, C or PLI languages using MS-DOS, CP/M, UNIX, or PICK operating systems would be advantageous although not essential.

Graduate Trainee WMC/CRS/430

Responsible to the Project Leader you will be involved in developing the next generation of products using 'State of the Art' hardware.

A graduate in computer science you should have an interest and flair in one of the following, graphics, database systems, language compilers or operating systems.

Rewards

All positions offer excellent salary packages, coupled with real prospect promotion and the opportunity of some travel abroad.

Please forward C.V.'s to Harry Chalmers, Director quoting the appropriate reference number and listing separately any companies in whom your details should not be sent.

SENIOR COMPUTER OPERATOR

The Equitable Life Assurance Society, a long-established but progressive and expanding company, has a vacancy for a Senior Computer Operator at its modern offices close to the centre of Aylesbury.

Our current installation is comprised of two ICL 2966s, an ME29/45 and we are planning to set up a branch communications network.

Applicants should have at least 3 years' ICL operating experience on DME/G2. Experience of VME and G2S would be an advantage. Ideally the successful candidate should be aged between 20 and 30 with at least 6 'O' levels, including Mathematics and English.

We operate a two-shift system (8.00am-4.00pm and 4.00pm-12 midnight) and candidates should either have their own transport or live within walking distance of the office.

The Society offers competitive salaries plus an annual bonus. Other benefits include a non-contributory pension scheme, 20 days' holiday a year, a staff restaurant providing free lunches and the opportunity in the future to be considered for a staff house purchase loan at concessionary rates.

To apply, please write or telephone, indicating briefly how you meet our requirements to:
Mrs Carol A. Bird, Staff Assistant,
The Equitable Life Assurance Society,
Walton Street, Aylesbury, Bucks HP21 7QW.
Tel: Aylesbury (0298) 33100.

The Equitable Life

FLIGHT TEST- HARRIER GR Mk5

Unequalled in its range of job opportunities

PRINCIPAL ANALYST

Working from technical requirements, we will expect you to be a positive, conceptual thinker with a natural ability to develop practical systems and concise design specifications. Ideally you should have an engineering or mathematical background.

With at least five years' relevant experience, some in a project or staff leadership role, you will be proficient in most of the aspects of computing mentioned below.

SENIOR SYSTEMS ANALYSTS

You will have experience of some of the following:-

- Technical requirements analysis and specification writing for software and computer hardware.
- DEC, VMS, and RSX operating systems.
- Software design and the application of structured programming techniques.
- Specification and design of software test procedures.

PROGRAMMERS

You will be fluent in FORTRAN and will be familiar with writing structured code. Experience of MACRO or, better, of MACRO 32 for VAX, would be a distinct advantage.

All these positions are based at Dunsfold Aerodrome, near Godalming in Surrey, but for further information, please write in the first instance, enclosing a C.V. if possible, to:

Mrs C. Wiseman, Personnel Officer (Design), British Aerospace plc, Aircraft Group, Kingston-Brough Division, Richmond Road, Kingston-upon-Thames, Surrey KT2 5QS.

Senior Computer Operators

The Computer Operations department of STC Components — part of a major electronics group — is continually being expanded. The department's exciting plans include an imminent change from the Honeywell 66 Series equipment to the latest DPS 8 equipment.

Senior Computer Operators are required to take responsibility for the day-to-day running of the installation, to assist with the training of junior staff and the prompt solving of problems. Activities in the department include running TDS/Batch work under GCOS, supporting a 300+ terminal network, with Remote Level 6s, at offsite locations, offering Batch and Printing facilities.

Reporting to the Shift Leader, you would work a rotating shift system Monday to Saturday.

This is an opportune time to join this vital department and to make a real contribution to its on-going success. Stimulating new challenges will frequently come your way, providing valuable scope to enhance your skills and develop your career.

You should be aged 20-30, educated to 'A' level standard and have a minimum of three years' operating experience within a multi-processing environment. Highly competitive salaries are offered for these positions, together with an attractive range of benefits.

JEDDAH

c.£20k Tax Free + Exceptional Family Benefits

Saudia, is now the twelfth largest IATA passenger carrier in the world and employs computers on a vast scale. In 12 cities and 8 countries our data networks link more than 1,000 computer terminals processing nearly 100,000 transactions daily and are used by more than 2,000 employees in their work.

Even greater expansion of our data services department is underway and we now wish to strengthen our team of computer professionals at our purpose-built data and communications centre in Jeddah. This modern operation supports a large IMS and CICS — based online operation, running on Dual IBM 3633 mainframes under MVS/SP1.3 with JES2. JES3 is planned for 1984.

SYSTEMS PROGRAMMERS £20,000+

These are senior positions within our systems support group demanding a high level of professionalism and motivation. Successful candidates will be educated to 'O' level standard and have a minimum of 7 years' in data processing, the last 3 of which will have been gained on the installation/support of one or more of the following operating systems: MVS, VTAM/NCP, CICS/VS, IMS/II/DC, all areas demand full knowledge of SMP.

TERMINAL OPERATORS £17,500+

These key positions will require a minimum of 5 years' large IBM operations experience, the last 2 of which will have been gained as an MTO supporting an IMS online operation. In addition to console operations, you will provide a 'help desk' function and be responsible for training Saudi nationals. CICS experience would be a distinct advantage. The position is shift-based, covering a 24-hour a day, 7 days a week operation.

We offer a highly attractive benefits package which includes:
★ Free villa or apartment in an attractive residential area.
★ Superb recreation facilities with swimming pools, tennis courts and sports club.
★ Subsidised schooling for children up to the age of 14.
★ Free flights for you and your family to the UK with the opportunity for several home visits each year.
★ Worldwide discount air travel.

These positions are open to men aged up to 55 on a 2 year renewable contract basis. Salaries are paid locally in Saudi Riyals (currently SR 5.2=£1) with no local income tax.

For informal discussion please call Peter Stevenson or Martin Kelly on

01-995 7755 ext. 138

Teach Computer Programming at Preston Prison

We're looking for an experienced person to teach, as a Civilian Instructional Officer, the practice and theory of Computer Programming to prison inmates. Much of your own boss. After an intensive course on teaching techniques, you'll be given responsibility for implementing a training syllabus. Trainees are prepared for the City & Guilds Certificate 747, 748 and other appropriate equivalent examinations. Secure A steady job and a regular pay packet. Good working conditions Every effort is made to build an atmosphere which is as similar as possible to any other office environment, although at certain establishments security may demand the presence of a prison officer.

Satisfying to know you're responsible for giving your trainees a basic skill and helping them, perhaps, to find a more useful way of life.

To apply, you should have a wide experience in the field of commercial computer programming. In COBOL or BASIC, a knowledge of FORTRAN would be an added advantage. Candidates should also have a knowledge of information systems. You should have received recognised training in the profession. Possession of a recognised qualification would be an added advantage.

Pay starts at £7,481 rising to £8,929 (including Environmental allowance), 5 day week, generous holidays.

For further information and an application form, please write to: The Home Office (R2/DH), FREEMONT, London SW1V 1YZ (no stamp required). Applications are invited from men and women.

The closing date for applications is 12th December 1983.

Data Processing Manager

North of London

Salary c.£20,000 + Benefits

NEW APPOINTMENT

Our client, one of the world's premier publishing companies, is committed to acquiring substantial in-house mainframe facilities to service existing business lines and support a major new product launch in the area of electronic data dissemination.

This is a true 'green-field' situation, reporting to the Managing Director, and will involve the successful applicant in evaluating a variety of options and building up internal staff resources as appropriate. Major areas of activity include instituting sophisticated data capture techniques, managing software development programmes and implementing electronic text dissemination facilities. Extensive liaison with external customers and software houses is indicated.

The requirement is for a self-motivated and technically orientated data processing professional with comprehensive experience of managing hardware operations and proven systems project management skills, preferably where external resources are employed. An in-depth knowledge of data communications in a global context is essential and specific experience of Videotex applications would be a strong additional recommendation. Age Indicator is in the 30's and a formal qualification is preferred.

To apply please send a CV or write or telephone for an application form to JOHN KITCHEN, at the address below, quoting Ref. GW1173.

Ambitious market development programme TOP-PERFORMING SENIOR SALES PROFESSIONALS: SHARE IN OUR SUCCESS

NOW is the time to secure YOUR future

Major accounts/vertical markets UK-wide opportunities
package from £23,000 + choice of quality car + benefits

We're a major force in the office automation market-place, with a substantial established sales base throughout the UK and a fast-developing product range encompassing everything from multi-function stand-alone to comprehensive shared-resources networks. Our current major expansion, coinciding with the introduction of a new generation of products, means there's never been a better time to join us.

As part of our progressive market development programme we are reorganising our field sales operation - and the creation of these exciting new opportunities is a key element of this strategy. We'll be reinforcing our existing hierarchical sales organisation with an entirely new sales team who will be involved in selling our full product range (WP, shared-resources and office automation systems) to major/national account customers and to vertical markets (especially finance, government and specific industrial sectors).

To spearhead this initiative, we're looking for experienced senior sales professionals with proven business development capability - men and women who, above all, have the potential to grow within a reorganised career structure leading to

branch or regional management or beyond. These rewarding opportunities will appeal to ambitious sales professionals who can back at least 5 years' successful selling in the computer/office automation industry with a mastery of the 'corporate' sell and an ability to negotiate effectively at board level.

The highly motivating target earnings figure of £23,000 will consist of competitive five-figure base salary plus commission. Top performers, however, can expect to exceed this considerably, thanks to the no-capping package structure. And the more impressive your track record to date, the greater can be your expectations within this very generous system of remuneration. Free health insurance, life insurance, pension scheme and, if appropriate, assistance with relocation are all included among the large company benefits.

If you feel you meet our requirements and would like to join a company whose business has increased by over 50% in the last 5 years, please Chris Durran (National Sales Manager) on Reading (0734) 883848 during office hours. Alternatively, write to him enclosing a detailed cv at Wordplex Limited, 2, Excel House, 48 De Montfort Road, Sadding, Berkshire RG1 6LP.

SYSTEMS MANAGER

Location: Lichfield, Staffs

Five figure salary
+ company benefits

J H Sankey & Son Ltd., one of the country's largest builders' and plumbers' merchants with a national network of trade outlets, is seeking a highly motivated and experienced systems manager to head-up a systems team with the prime task of developing effective in-company procedures and applications.

The successful candidate must demonstrate a proven record in the management and implementation of projects evaluated and approved through cost benefit studies to establish their feasibility and practicality.

A capacity for planning, directing and co-ordinating systems through the motivation of staff and effective communications with management is an essential feature of the appointment.

The submission and subsequent implementation of approved proposals for the introduction of new manual and data processing systems together with ongoing reviews and recommendations on company D.P. equipment will also form part of the overall position responsibilities.

The position carries with it an attractive salary package including a first class pension scheme and private medical insurance.

Applications which will be dealt with in strictest confidence should be addressed to:

Ted Smith, Personnel Manager,
J. H. Sankey & Son Ltd., Station House,
Harrow Road, Wembley, Middlesex

(1648)

SANKEY

LONDON SCHOOL OF ECONOMICS
COMPUTER SERVICE

RSTS SUPPORT PROGRAMMER

The school has several PDP-11 computers which are used for a variety of wordprocessing and administrative tasks in areas such as student records, information retrieval and timetabling.

Applications are invited from experienced programmers to assist with support and maintenance of RSTS, including systems organisation and optimisation, installation and upgrade of word-11 and Cupid packages and related software troubleshooting, development of applications programs using Qedit, Qmail and Cupid.

File transfers between the RSTS machines and a variety of other computers, from micro to mainframe.

Applicants should have a degree in a computer-based discipline and preferably two years' relevant experience. Salary according to age and experience will be in the range £12,000-£11,000.

Application forms returnable by 8 December 1983 may be obtained from the Personnel Department, LSE, Houghton Street, London EC2A 2AE. Telephone 01-404 4760. (1679)

THE BRITISH PRINTING INDUSTRIES FEDERATION

ANALYST/PROGRAMMER

to continue the development of a management information package for printers. The package is being written for micro computers and is centred around costing and estimating.

The work will also involve installation of the package in member firms and provision of additional software to meet individual requirements.

This job will be an interesting challenge to a self-motivated person who, preferably, has knowledge of accounting or costing requirements, is skilled in the use of M.BASIC and COBOL and is familiar with the CP/M operating system. Preferred age range: 30-40.

and

PROGRAMMER

to work with the analyst/programmer on the development of the package. Experience of M.BASIC and the CP/M operating system required.

The job will enable a young programmer to gain experience not only in programming but also in the management information needs of a wide range of companies. Preferred age range: 20-30.

Attractive salaries, according to experience, and a good pension and life insurance scheme are available.

Apply to: Director General, BPIF, 11 Bedford Row, London WC1R 4DX. (1644)

MOSCOM LIMITED

SALES SUPPORT ENGINEER

Moscom are a manufacturer of telecommunications equipment distributed worldwide. We require someone with a minimum of three years' experience as technical support for the sale of telecom equipment.

Experience should include a knowledge of the telecommunications industry and microprocessor based equipment. Duties to include on-site demonstrations, data collection, installation, preparation of technical quotations, performance specifications and design audit tests. The position would appeal to a self-motivated individual who wants to advance with a new dynamic company, and who enjoys travel throughout Western Europe.

Salary commensurate with experience. Please submit c.v. in strictest confidence to: Mr J. Constant, Director Technical Support, Moscom Limited, Weston Park House, New Newton Road, Newton (near Hounslow), Middlesex.

that work for each other. Such individuals will have a genuine interest in their job and their role within the company. In return you will receive the satisfaction of total involvement in both the company's and your own personal development. A full relocation package is available.

A key individual, the successful candidate must possess a strong technical background obtained in a micro environment. As important is the maturity and personality to administer the function in addition to training and supervising technicians.

Two-three years' electronics experience including involvement with micros and peripherals and an interest in software is desirable. Component level ability and an HNC or equivalent qualification is advantageous.

Systems Engineers with competency in both hardware and systems software are required to support dealers and distributors in both the UK and Europe. Exposure to both mainframe and micro environments is advantageous as is experience of MS DOS. An element of foreign travel is expected.

For an informal discussion ring Chris Bond or Kirk Blackmore on 01-637 9611

Operations Manager

c £11,250 Dual HP 3000 Birmingham

"An exciting opportunity to participate in the development of computer facilities and future strategy in a Management role"

As an important member of a large International Group, we are fully committed to the widespread use of computer technology. Our dual HP 3000 installation, together with a combination of other mini and microcomputers, provides a sophisticated computing facility catering for traditional commercial and manufacturing applications. Our objective in the short term is to extend our resources to provide an efficient computer controlled plant.

To help us realise this important objective, we now wish to recruit an Operations Manager. The successful candidate will possess in-depth operations experience from the interactive mini area - ideally, but not essentially, HP 3000 based. The role of Operations Manager will encompass the supervision and direction not only of the day to day operations function, but also with the forward planning of hardware and software development including local area networking and communications.

The position is ideally suited to an individual who is prepared to become totally involved in all aspects of a busy and developing computer installation. The ability to communicate effectively with Management, Users and Colleagues is considered as important as technical ability.

A first class salary package will be available, enhanced by relocation facilities, pension scheme and 25 days' annual leave.

In the first instance, please contact **Jim Mitchell** on 021 236 3781 (24 hour answering service) or on 021 455 7653 (evenings and weekends until 9.00 p.m.).

Telecommunications/ Data Specialists

Are you ready to make a major career move?

CROYDON up to £11,800

Join our Network Control Group and get involved with our rapidly expanding on-line Network. This is one of the largest of its kind in the UK.

The Data Network consists of approximately 1400 terminals attached to an IBM 3081 and an Amdahl 580/60. A further 40% growth is expected over the next few years including significant moves towards Distributed Processing.

You can offer us experience in:

- Evaluating and selecting new equipment
- Installation and planning
- Operational fault diagnosis and repair
- Interactive and distributed processing
- Equipment commissioning
- Mainframe data communications

We can offer you the opportunity to contribute to our continued expansion.

You will preferably have reached HNC standard of education and will have the initiative to play a significant role in the work of the group.

A car allowance will be paid for travel throughout the South Eastern Region. Benefits include relocation assistance where appropriate, excellent working conditions, generous holidays, sports and social facilities (including squash and tennis).

Please write with full career details, quoting reference no OR139, to: Personnel Manager, South Eastern Gas, Segas House East, Katharine Street, Croydon CR9 1JU.

SOUTH EASTERN GAS

A top level role for an IBM SOFTWARE SPECIALIST with an ATM networks background £ NEG Scotland

NCR, one of the world's leading Auto Teller Machine manufacturers is seeking a highly intelligent and articulate software specialist to fill a senior post at its East of Scotland design and development operation.

Acting in a consultative role, your main responsibilities will be to provide applications support to marketing and development groups and to liaise with customers in the banking community throughout the world at the highest level.

The successful candidate will have a minimum of four years experience gained in an IBM environment which will have provided an in depth knowledge of CICS. Recent involvement in the design or installation of a network of ATMs or other types of banking terminals would be ideal.

The salary package on offer will more than meet the expectations of the highest calibre of individual and the benefits are those one would expect of an International Company, including ample relocation assistance.

Please write with full personal and career details to: Ian Hume, Manager - Employee Relations, NCR (Manufacturing) Ltd., Kingsway West, Dundee DD2 3XX.

NCR

Manager
Computer Division
Preston
c£15,000 (Negotiable)

Community Task Force, a national company with charitable status, has developed rapidly through successive Government programmes to provide work and training for the unemployed and school leavers. Currently, CTF is engaged in the Youth Training Scheme and the Community Programme on a substantial and national scale.

The Company operates an IBM System 38/4 with remote System 34's for employee administration and provision of management, statistical and financial information. This equipment has recently been installed.

Our present Manager is coming to the close of his secondment period and a permanent successor is being sought. Reporting directly to the Chief Executive, the successful applicant will be responsible for the development of new and improved information systems plus co-ordination with other Divisions in research and development of computers as training aids. In addition to computer activities, the Manager is a member of the senior management team.

Applicants must have had practical experience of managing a vigorous DP Department. Drive and imagination, together with the ability to motivate staff and meet strict development timetables are prerequisites for the post.

Applications in writing to: R.L. Thomas Esq., Professional and Executive Recruitment, 8th Floor, Victoria House, Ormakirk Road, Preston PR1 2DX.

Applications invited from either sex.

Executive Selection

CICS Specialists

London

c. £3000/month

We require two experienced CICS Systems Programmers to undertake open ended assignments for separate clients, with initial commitments of between 3 and 6 months. In one case the role will be to carry out CICS performance monitoring/tuning in a multi-cpu installation running MVS/SP 1.3, CICS 1.6 and DL/I, including liaison with on-site MVS and VTAM specialists. The other client has recently installed MVS with CICS and DL/I and needs support in tailoring the CICS environment, installing a high-level development package and providing technical support to applications staff. Candidates for either assignment should have more than two years CICS experience, gained preferably in an MVS environment.

T064-055

IMS Fast-Path Specialist

UK

c. £3250/month

We are seeking an IMS DB/DC Design Consultant for a 12 month assignment in London. Applicants should have already played a key role in the design of several on-line IMS systems, and will ideally possess good knowledge about the design and performance constraints of the Fast-Path feature, together with some knowledge of communications protocols including PSS/X.25. The job role will be primarily to provide design advice to an application team developing a complex real-time system with IMS transaction rates which could approach 1000/second, although some involvement in other Fast-Path applications is likely.

J061

PL1/Analyst/Programmers

Home Counties

c. £2250/month

We are seeking Analysts/Programmers at several levels of seniority to work on a 6 monthly renewable contract basis at our Client's IBM 3033 + 4341 Data Centre. Software in use includes MVS, VM/CMS, TSO/SP, CICS and IMS DB, and applicants should have good knowledge of at least 2 of these in addition to PL/I. Start dates for these assignments range from late November 1983 to Easter 1984.

J063

MVS Systems Programmer

Home Counties

c. £2350/month

We need an additional Systems Programmer to join our Client's system support team on a 6 monthly renewable contract basis. The current configuration consists of multiple 4341's running MVS/SP1.3, JES2, CICS, IMS DB, RACF and a variety of other Program Products. A major CPU upgrade is planned for early in 1984. Applicants should have as a minimum, a good basic grounding in MVS, together with knowledge of at least one of the other products above. The successful candidate will start the assignment in December or January.

CAREER OPPORTUNITIES IN MANAGEMENT SERVICES

HALIFAX (£7,500 - £11,000)

We are Samuel Webster and Sons Limited, part of the brewing division of a major international company. At our Fountain Head Brewery located two miles from Halifax into the Pennine countryside we employ over 500 people in the production, packaging, distribution and retailing of beers, wines and spirits throughout the Yorkshire region.

Due to promotion into Line Management we currently have two vacancies for Management Services Officers in our Department, which provides a professional, project-based service to all functions within the company. Projects range widely from the implementation of office automation (using some of the most advanced equipment available today) to the more traditional applications of analysis techniques in both the office and outside environments.

The persons appointed will be in their mid 20's to early 30's educated to degree level with formal training and several years experience in the area of business systems analysis. Some experience in the development and implementation of computer based systems is essential and programming knowledge would be an added advantage. A high degree of self-motivation, numeracy, tact and the ability to communicate effectively are also required.

We offer a competitive starting salary dependent on qualifications and experience, excellent career development opportunities, plus the other benefits normally associated with a major organisation. Relocation assistance will be given where appropriate.

If you feel your standards can match ours then please telephone or write for an application form to: J. E. Mahon, Manpower Resourcing Manager, Samuel Webster & Sons Ltd., Fountain Head Brewery, Ovenden Wood, HALIFAX HX2 0TL. Tel: 0422 57188

“Rapid growth and a diversity of business operations are their distinguishing marks.”

The UK subsidiary of one of the world's largest banks operates across the whole spectrum of commercial and business finance. Addressing such diversified customer needs demands the most sophisticated yet flexible computer resources. Response to these needs is reflected in a programme that currently involves: KAPITI international banking system development, integrating the Bank within the SWIFT network and augmenting the present System 38 and 34 networked configuration with a second System 38.

SENIOR SYSTEMS ANALYST

To £16,500 plus benefits West End HQ

This new position interfaces between users, O & M and the Computer Centre. The purpose is to evaluate and translate banking requirements through system design to implementation, testing and documentation, ensuring user acceptance. It requires a blend of commercial banking and formal systems experience, preferably using IBM GSD hardware and KAPITI, and will appeal to a free spirit seeking a green field opportunity and management promotion.

Both positions offer considerable scope for promotion and personal advancement within dynamic and friendly environments.

The additional benefits comprise subsidised mortgage, free banking facilities, free medical insurance, free season ticket loan plus easily accessible and modern office accommodation. To apply for either positions, please contact their Advising Consultant, Roger Dorricott on 01-935 0671 (24 hour answering service) or alternatively submit your Curriculum Vitae to him at the London office address below.

User Software . . .

The Real Fifth Generation Challenge

Attractive Thames Valley Location Salaries £8,000 to £14,000 (overtime paid)

★ **Data Dictionary** ★ **Man/Machine Interfaces** ★ **Applications Builders**

We are firm advocates in the belief that the user knows best when it comes down to applications design. That is why we have established a development team with the sole purpose of designing and producing 'Self Assembly' software tools for tomorrow's market.

We wish to attract a number of creative Software Designers and several talented Software Programmers to complete this new development team.

If you have upwards of eighteen month's machine-biased system software experience, primarily of HIGH LEVEL structured languages, we could be of interest to you particularly if you have previous experience in writing:

★ **Screen Handling Software** ★ **Code Generation Software**

Our environment befits a 'leading edge' technology company, where individualism and teamwork are both encouraged. Our software people enjoy dedicated desk-top development facilities, with each terminal supporting a comprehensive array of development tools.

The atmosphere at our NEW PRESTIGIOUS offices is relaxed and informal with the accent on creativity.

If you feel you could contribute to this exciting new development project then apply to Alan Carnell on 01-935 0671 (24 hour answering service) or 05827 2976 (evenings and weekends 7-9.00 p.m.). If you prefer however submit your detailed Curriculum Vitae to our London office quoting reference A.S.D.1.

ENGINEERING AND PROCESS CONTROL Systems Development Manager

West Midlands to £14,000 + two lease cars

As a major UK company, we have a high reputation for product reliability and quality, recognising the need to ensure that both product and production remain cost effective and obviously, competitive. We fully appreciate that in today's world, efficient manufacturing depends upon effective computing facilities, and we intend to maintain our lead in the use of both mainframe and minicomputer systems in all aspects of our business.

We are now seeking a major, decisive and ambitious systems development plan utilising the versatile IBM and Burroughs, and experienced CAD/CAM/PLAN, etc. As a result, our systems development team is growing rapidly.

Systems Development Manager (Engineering and Process Control)
We are seeking a major, decisive and ambitious systems development plan utilising the versatile IBM and Burroughs, and experienced CAD/CAM/PLAN, etc. As a result, our systems development team is growing rapidly.

The successful candidate will be responsible for the development and implementation of systems for the engineering and process control departments. The candidate should have a minimum of five years' experience in the field of systems development, with a strong background in the use of IBM and Burroughs systems.

LOOKING FOR STAFF...OR SEEKING A NEW JOB?

How we've got it

By sheer professionalism. We are the fastest growing, most progressive computer and staff resourcing company in the business. Many of our own staff have a wide experience of computing - so you know we speak your language.

Why we've got it

Because we insist on the best. And so do you. A Lorien job is always worth careful consideration. A Lorien job hunter will always be on any company's shortlist. It's the pride and professionalism of our service that keeps us out in front.

Where we've got it

At Greencoat House, London and O.C.S. House, Leeds. Our rapid rise to success has not only taken us to the capital, but has seen us establish permanent premises there. When we make a move it's in your interest to follow. So make the right move now, contact 01-630 1433 or 0532 455911.

THE EUROPEAN PATENT OFFICE

is an international organisation established for the granting of European patents. Its head-office is in Munich (750 staff). The filing and technical examination are executed at the branches in The Hague (900 staff) and Berlin (130 staff); for this purpose a documentation service of more than 12,000,000 systematically classified patent documents has been organised.

The EDP Department is located in The Hague (Rijswijk). The present installation is an IBM 4341 (8MB) operating under VM with DOS/VSE, power, CMS, VTAM.

The teleprocessing network consists of local 3274 controllers with 200 terminals attached and a 3705 remote controller with 100 terminals attached (Munich and Berlin) plus RJE and a link to EURNET.

The software used is CICS, IDMS, ADS/ONLINE, STAIRS, DCF/DLF and APL.

The EPO is seeking for its branch in the Hague:

PROJECT LEADERS (SYSTEMS ANALYSTS)

They will work in close liaison with other departments for the EDP projects in support of the administration of the Office. They also participate in the technical realisation of the EDP systems.

Applicants must have a university degree, an active knowledge of English and the ability to understand the other two official languages (German and French). At least two years' experience in systems analysis and programming in COBOL is required. For one of the vacant posts, preference will be given to candidates familiar with database management systems (preferably IDMS).

For another of the posts, we seek applicants with experience in one or more of the following fields: electronic publishing; word and image processing, document storage, integrated workstations, etc.

SENIOR PROGRAMMER

for administration projects. A complete secondary education and at least four years' experience with COBOL is required; experience with CICS and IDMS, ADS/ONLINE would be an asset. Furthermore a working knowledge of English and knowledge of French and/or German is required.

We offer very attractive salaries and allowances (free of national tax) and conditions of employment in line with the standards of international organisations such as NATO, OECD, etc.

Further information and application forms are available from: Mr A. P. Brabander, EUROPEAN PATENT OFFICE, DG1 Personnel Department, Patentlaan 2, 2288 EE RIJSWIJK, The Netherlands. Tel: (070) 90.67.89

The closing date for applications is 12th December, 1983

Actions speak louder than words

All you have to do is complete the coupon, register your career data with us and our 10 megabyte mini helps us do the rest. We scan the register to see which of the many vacancies suit you exactly, and once the right one - or more - has been identified, providing it is not excluded by you, our clients contact you direct. The service is completely free and, as we've said, absolutely confidential. It's the fastest, most effective way to put two decision makers together and it's helped thousands of people find better jobs for over 11 years.

As an ambitious d.p. professional, you can't devote as much time to furthering your career as you'd like - so why not let someone else do it for you? Just one simple application form could put you on your way to a new, more rewarding future. To get your explanatory brochure post the coupon today.

In particular we are looking for:
Commercial and Scientific Programmers • Systems Software Designers • Systems Analysts • Systems Engineers • Designers/Team Leaders • Software Programmers/Engineers • Technical Support Engineers • Business Analysts • CICS Consultants • Chief Engineers (Software) • Hardware/Software Instructors • Project Leaders • and many others

Salaries range from £8,000-£16,000 with ages from 20-40 at various locations throughout the U.K.

To be considered for these and other important career positions all you need to do is post the coupon today to Stuart Tail, The Lansdowne Appointments Register, Park House, 207 The Vale, London W3 7QB. Tel: 01-743 6321 (24 hr answering service).

All posts are open to men and women and our service is completely confidential for companies and jobseekers.

Sales Opportunities with Tangent

Our new UK Head Office in Brentwood and a new London office establish us even more firmly as one of Europe's leading software houses. The success story of Tangent is impressive by any standards and our rapid growth rate has been matched by the quality and professionalism of our software and consultancy services. Now in our tenth year of business Tangent is a respected force in the software world and our services are in demand by major client companies worldwide. Tangent is interested in hearing from experienced Sales Professionals and also, people with data processing experience wishing to move into sales. Vacancies are in the following areas:

Software Products

Our growing products division markets and supports the Global ACCOUNTING IV range of products for IBM mainframes and the CONTROL/38 range of accounting products for the IBM System 38 market. In addition Tangent also sells MARK IV programming aids and program efficiency products for the IBM market.

Project Development

Our project group undertakes major fixed-price end time and materials projects for clients worldwide. The division specialises in IBM mainframe and System 34, 38 projects and also the Hewlett Packard 3000 range.

Professional Services

The division provides skilled consulting Systems and Programming staff to work on client location in the UK, Europe and the Middle East our consultants combine both permanent and contract employees.

Tangent offers an attractive package which includes:

- * excellent salaries
- * attractive commission and incentive schemes
- * company car
- * non-contributory pension
- * comprehensive medical and insurance scheme

Please contact Susan Buchan on Brentwood (0277) 255755 (24 hour answering service) or write to Tangent Computer Services Limited, Fairfield House, Fairfield Road, Brentwood, Essex CM14 4LR.

Introducing a new chapter in the success story of Tangent

tangent Computing Services Association
success in the Software world

Handwritten: Not interested
Compensation too low
No experience in this area

Location; to the North of London: Large IBM environment

Our client is a major IBM user. Their International Data Centre Headquarters is based to the North of London. Because of changes they now wish to fill the following vacancies.

Systems Programmer (Salary c. £14,000 p.a.)

We are looking for someone with at least 2 years' systems programming experience who during that time will have worked in an MVS/SP environment. The position is particularly attractive as it offers not only the opportunity to support software and hardware in the United Kingdom but also internationally, and will certainly involve some overseas travel. Successful applicants will probably be graduates who will be committed to working in the Systems Programming area.

User Support Specialists (Salary c. £12,000 p.a.)

These are particularly interesting positions. The successful applicants will have a good knowledge of programming and IBM software and will play the role of the "Systems Engineer" resolving user reported software problems, advising users on how to best utilize current software. At the same time they will ensure that users are aware of new products within this important area.

APL Specialist (Salary c. £12,000 p.a.)

We are looking for someone with a good knowledge of APL and perhaps TSO over a period of 2 to 3 years. The position will attract someone who has worked within the computer service industry or a large user. Personality and communication skills are very important as there will be considerable contact with users at all levels.

Our client offers an excellent range of benefits and where necessary there will be relocation assistance.

To apply, please telephone Jane Jones today or write to her at: A&A Consultants (Holding) Ltd., County House, 10 Little Portland Street, London W1. Tel: 01-631 4184.

Information Systems Manager

South Wales Salary negotiable

The British Telecom Factory at Cwmarn, near Newport, Gwent, is responsible for the manufacture and repair of telecommunications customer products and employs over 1,100 people.

As a result of recent re-organisation and expansion, we now wish to fill the newly created post of Information Systems Manager.

Your brief will be to act as the management specialist on all matters relating to computer policy, to develop existing computer systems and, where necessary, implement new ones, and take control of all computer budget expenditure.

You will head your own small department and will be involved with the implementation of a large new mini-computer system featuring advanced data base techniques, together with two other systems.

For the right person, this post will prove an attractive computer management and operations opportunity.

where the systems comprehensively cover all manufacturing aspects, from stock control through to financial reports, including production and management information.

Ideally you should have a degree or equivalent, or possess a professional computing qualification. Certainly you must have 3 years' experience at the very least in the computer field, including programming and computer operations, and some systems design. You will also need to show proof of managerial ability or that you have the potential for it.

Salary will be negotiable, depending on age and experience, and relocation expenses are available, where appropriate.

For an application form and further information, please contact Jayne Brown, Personnel Department, British Telecom Factory Telephones, Cwmarn, Crieskys, Newport, Gwent NP1 7ZB. Tel. (01495) 270521. Applications are invited from men and women.

GROUND FLOOR OPPORTUNITY

SURREY £8-£10K + car

Our clients are a small consultancy with a full order book for customised, micro-driven office networks. This is a unique opportunity for an ambitious and able PROGRAMMER with an aversion to "the big company".
As understudy to a top consultant, you will enjoy new languages, software, techniques, etc., meeting customers, implementing new applications in a wide range of industries; there are early prospects for partnership status.
If you have a good academic background, one year or more commercial programming and want something different - then ring for details now. Ref: G1071.

db executive (kingston) ltd

CONTRACT OR PERMANENT

THE FASTEST GROWING CAREER ENVIRONMENT IN THE WEST -

Tangent are a leading International Software House. Now, with the opening of two new offices in the States we can offer many more D.P. people the opportunity of Contract or Permanent positions throughout the USA.

PUBLIC SECTOR

LONDON BOROUGH OF HAVERING Housing Department HOUSING PROGRAMMER

Grade APTC Scale 3/4
Salary £6,237-£7,602 inclusive

This is a key post in a progressive Housing Department with a considerable commitment to the use of High Technology in the Housing Service.

The Department has a network of computer equipment based on a central OEC POP 11/44 programmed in Basic + and peripheral Olivetti TC 800s programmed in Assembler. Most aspects of Housing Management for the Council's 17,500 dwellings are computerised and the successful candidate will be expected to deal with the maintenance of existing software and new software developments in housing and associated fields.

Ideally the successful candidate will have some experience at Basic + running on a OEC Series II mini under RSTS/E, together with an appreciation of the OEC and Olivetti hardware and on-line real time communications. Candidates should be able to work under pressure and have had some experience in business systems, database systems and/or property management systems. Suitable training will be given if necessary.

Application forms and job description available from the Housing Manager, Mercury House, Romford RM1 3OT. Tel: Romford 68998, ext. 428. Closing date: December 9, 1983.

Inner London Education Authority

ILECC - Inner London Educational Computing Centre
John Ruskin Street, London SE5 0PQ

PROGRAMMER/ANALYSTS

(Prof. B/C) -
Salary range - £7,258-£12,552 plus £1,284 L.W.A.

Vacancies exist for programmer/analysts in (i) work on software development for the support of educational users in schools and colleges and (ii) for work on developing CAL packages in a wide variety of disciplines for use on RML 380Z, 480Z microcomputers and IBM for work on developing applications packages for two PRIME 550s. The programmer/analysts recruited should be people with a variety of language and software experience. Teaching experience is not essential.

Application forms and further details are available from:- The Education Officer, ILECC, John Ruskin St, London SE5 0PQ. Tel: (0703) 40001. (Please enclose a stamped addressed envelope). The closing date for the return of completed application forms is 9th December 1983.

ILEA is an equal opportunities employer.

TEESSIDE POLYTECHNIC COMPUTER CENTRE PROJECT MANAGER

Post Ref: P016, Salary: £10,588-£11,733 per annum.

To lead a team of programmers/analysts in the design and production of software for the Administrative work of the Polytechnic. This software is being written using a powerful and sophisticated management information system on a Prime 750 computer.

The post offers an excellent opportunity for a systems analyst or experienced programmer to further their career by moving into a management position in one of the leading Computer Centres in the educational field.

Application forms and further particulars from: The Personnel Section, Teesside Polytechnic, Borough Road, Middlesbrough, Cleveland TS1 3BA. Telephone: Middlesbrough (0642) 210121, Extension 4114.

Closing date for applications: 9th December, 1983.

FRENCHAY HEALTH AUTHORITY

SOFTWARE ENGINEER FRENCHAY HOSPITAL

Salary scale: Up to £9,000 p.a. dependent on experience and qualifications.

Computer Scientist required to join the computing section of the Department of Medical Physics at Frenchay Hospital.

Medical Physics is a multi-disciplinary department and the computing section is responsible for all aspects of any computer work undertaken within the Authority. Work is carried out on a considerable number of PDP 11s and micros. The computing section works on a very broad spectrum of applications, and this post will primarily be involved with patient administration systems written in MUMPS.

Applicants should have a very sound grounding in software and an appreciation of hardware. Knowledge of DEC hardware and software, particularly MUMPS, would be an advantage.

Application form and job description available from the Personnel Department, Frenchay Hospital, Bristol BS16 1LE. Tel (0272) 565856 ext 578. Closing date 5 December, 1983.

EDUCATION DEPARTMENT MONKWEARMOUTH COLLEGE OF FURTHER EDUCATION DEPARTMENT OF SCIENCE AND TECHNOLOGY SENIOR LECTURER/COLLEGE CO-ORDINATOR FOR COMPUTING £10,683 - £12,552

Applicants should have appropriate qualifications and experience. The successful candidate will be expected to lead the Computer Section and to co-ordinate the provision of computing throughout the College.

Duties to commence: 1st May, 1984.

Application forms and further details available upon receipt of a stamped, addressed envelope from the Principal, Monkwearmouth College of Further Education, Swan Street, Sunderland, SR5 1EG. Closing date for applications: Two weeks after the appearance of this advertisement.

borough of
sunderland

Essex County Council CHELMER INSTITUTE OF HIGHER EDUCATION School of Computing

SENIOR LECTURER IN COMPUTER STUDIES

A suitably qualified person is required as soon as possible to teach at Higher National Diploma level.

The Institute was recently selected by the Government as a centre for expansion of Computer Studies courses.

Applicants will preferably have had commercial data processing experience and should have specialist knowledge in one or more of the following areas:

- Business applications of computers: Information systems analysis, design and management; current systems analysis and design methodologies; database system design and implementation.

Salary: Senior Lecturer £15,883-£13,443 (per annum).

Application forms and further details from: Principal Administrative Officer, Chelmer Institute of Higher Education, Victoria Road South, Chelmsford CM1 1LL. Telephone Chelmsford 354461, Ext. 247. Closing date: December 9, 1983.

THE UNIVERSITY OF SHEFFIELD COMPUTING SERVICES Programmer in the Microprocessor and Microcomputer Laboratory

Applications are invited from men and women for the above post involving a fixed term of three years from a date as soon as possible. The post involves the development of software and the analysis of software problems. However, the solution of existing hardware problems is also an important aspect of the work, for example problems involving the interconnection of microcomputers and mainframes. A relevant degree and considerable experience with microcomputers, preference being given to those with a degree in Computing Science, are essential. Programming experience should include both high and machine-level languages. Initial salary in the range £3,310-7,330 a year on Grade 18 for Other Related Staff, rising to £3,330 a year. Particulars from the Registrar and Secretary (Staffing), the University, Sheffield S10 2TN to whom applications is invited including the names of three referees should be sent by 15th October, 1983. Quota Ref: R11/83

Hereford and Worcester County Council REDDITCH COLLEGE Department of Technology Computer Unit

LECTURER GRADE 2 - COMPUTING

Required from 1st January, 1984, a Lecturer in Computing, Data Processing, Programming and Computer Studies on courses leading to SEC and Higher SEC and Professional Qualifications, SEC/TEC Diploma in Computer Studies, TEC and Higher TEC and other computer courses. Applicants must possess a degree or equivalent professional qualification preferably with recent computing and/or teaching experience. Commanding salary within L1 range £7,215-£11,588 dependent upon age, qualifications and experience.

Further details of this post, together with application form, may be obtained from:

The Principal, Redditch College, Peckham Street, Redditch B96 8DW. Telephone: Redditch 63007.

WARWICK WOODWARD NEED AN ADDITIONAL RECRUITMENT CONSULTANT

Warwick Woodward is considered to be among the UK's most successful and professional recruitment consultancies. Our client and applicant testimonials speak volumes for our service to the industry.

We now need an additional recruitment consultant to help us continue with our expansion rate. We are not looking for paper shufflers or flashy sales people but would like to find the right person to dovetail with our existing team of experienced consultants.

The likely applicants will be able to demonstrate either a successful background in recruitment or they may be working in DP with a strong desire to move into this highly specialised field.

As background information, you will be interested to learn that Warwick Woodward is part of the flourishing Span Group of Companies whose other member companies are listed as follows:-

Span Computer Contracts

Providing contract support in all areas of DP.

Taurus Technology

Leading edge training and consultancy specialists in UNIX, C and Ada.

Structured Methods

Training, consultancy and project management in the structured methodology approach.

Computergeneral

A business systems house for the first time user.

Span Australia

A subsidiary based in Sydney marketing all the group's services.

Windmill Advertising

An advertising agency which produced this and all the group's advertisements.

The Successful applicant will be well rewarded both financially and in terms of job satisfaction. We expect the sort of performance that comes with maturity (not necessarily in years), sales ability, the gift of ideas and the desire to help others plan their career or their staffing requirements.

If you feel you have a positive contribution to make to Warwick Woodward you should talk to Janet Chilvers our manager on 01-734 7394 during working hours or on 01-241 3341 evenings and weekends.

WEST MIDLAND OPPORTUNITIES

COMPUTER MANUFACTURER CUSTOMER

SUPPORT EXECUTIVES

£12-£15,000 + Car

Retained by several leading manufacturers who seek Support expertise in one or more of the following areas: Financial, Manufacturing, Office Automation or Transaction Processing.

SYSTEMS MANAGER/TEAM LEADER

c. £12,000

An ideal opportunity for a Senior Systems Analyst/Project Leader to manage a team utilising the latest in IBM Hardware.

DP CONSULTANTS

c. £15,000 + Car

An International Consultancy is seeking to strengthen its existing professional team who offer specialist Accounting, Engineering and DP skills.

TECHNICAL MANAGER

Up to £16,000 + Car

Required for a software house to manage a small team of IBM professionals supporting APL, MVS/TSO, and VM/SP.

PROJECT MANAGER

To £16,000 + Car

Our client requires a Manager capable of leading to successful completion a number of major Database projects.

SENIOR ANALYST/PROGRAMMER

£10,000 + Car + Perks

A leading software house requires a strong RPGII or RPGIII background to work on a range of commercial and manufacturing systems projects.

COPICS ANALYST

£11,000 + Car

A leading IBM user requires successful implementation of MRP.

SYSTEMS ANALYSTS

C. £11,000 + Car

Retained by several successful Midland mainframe users for an excellent variety of commercial business systems.

DEC VAX SPECIALISTS

To £12,000

A major consultancy requires in-depth BASIC/COBOL gained on VAX together with proven Systems experience.

PROJECT LEADER

£11,500

This position would suit a Senior Systems Analyst with sound man management and systems knowledge.

ANALYST/PROGRAMMERS

£10,000 + Car All + Bonus

A leading Midlands software house requires strong ICL or IBM or any strong Mini background; particularly OMAC or Q-PAC exposure would be welcomed.

ANALYST/PROGRAMMERS

To £10,000 + Benefits

We require experienced BASIC Programmers for a number of software houses and user companies.

PROGRAMMER/ANALYST

£8,500

A well-established centrally based installation requires strong IBM COBOL or INTERACTIVE MINI COBOL to develop info systems.

RPGII PROGRAMMER TO LEARN RPGIII

£8,000

Genuine opportunity for a young IBM SYSTEM 34 Programmer to take advantage of System 38 training.

PROGRAMMERS

£7,500-£8,000

Ideal move to utilise two years' COBOL experience at this prestigious modern user mixing mainframe and mini hardware.

System Co-Ordinators - Run Writers

If you've used it, you'll appreciate it, but where is your career leading you in 1984?

Consider this: join a major US Consultancy and work with the experts.

You will have a minimum of six months' experience and be familiar with ECL and Mapper transaction, rather than function.

The above combined with a spirit of adventure plus the desire to enhance your existing skills will provide a 'not to be missed' opportunity.

In addition to competitive US salaries, our client offers an excellent relocation package, free return flights and all the benefits of any major US company (including comprehensive insurance cover).

Full 'H' Visas will be provided and start dates are envisaged to be January/February 1984.

For more details and an insight into working in the USA, ring Janet Chilvers or Kay Williamson on 01-734 7394 or Janet Chilvers on 01-241 3341 evenings and weekends.

CROSSWORD

Solution to Prize Crossword No 46

This month's first prize of £10 has been won by Tim Hopkins, lecturer in computer science at the University of Kent, Canterbury. Prizes of £5 each are on their way to Alan Chaplin, a systems analyst at the DHSS in Newcastle Upon Tyne; and Dr David Flower, mathematical modeller at the Cement and Concrete Association, near Slough.

LONDON SCHOOL OF ECONOMICS
COMPUTER SERVICE

VAX/VMS SUPPORT PROGRAMMER

The school has recently installed a large dual VAX 11/780 computer system operating under VMS, together with around 100 disc based colour workstations. A high speed local area network is planned for 1984, and a wide range of applications software and languages is to be made available with particular emphasis being placed on the development of an integrated software environment centred on the use of database graphics and other software tools.

Applications are invited for the post of Support Programmer in the computer service. The successful applicant will be involved in a variety of systems and application software projects in support of the development of the VAX service.

Applicants will be expected to have a good Honours Degree in a computer-based discipline. Salary according to age and experience will be in the range £7,400-£12,000. Application forms returnable by 8th December 1983 may be obtained from the Personnel Department, LSE, Houghton Street, London WC2A 2AE. Telephone 01-444 4766. (18740)

SENIOR ANALYST
PROGRAMMERS

Central London

Salary package to £14,000

Fraser Williams (Commercial Systems) is recruiting two senior analyst programmers to join support and development teams working on a range of package and bespoke systems.

You should have a minimum of four years' commercial systems experience and ideally be familiar with Oxis General computers and business Basic; experience with property systems is also desirable.

These positions offer excellent career prospects and varied work in a fast growing company within the Fraser Williams Group. Please contact John Wright on 01-936 4041 or send your cv to:

THE LAW SOCIETY

Production Controller

£7,919-£10,353 p.a. (including London Weighting)

The Law Society is responsible for the administration of the Legal Aid and Advice Scheme on behalf of the Government. To assist in carrying out this task it has a SPERRY UNIVAC 9404 Mainframe installed in Central London and Micro-Processors are being installed in 15 Area Offices throughout England and Wales.

We now require a Production Controller who will be responsible for the day-to-day running of Computer Operations including Data Control. Applicants must have considerable experience at a senior level in computer operation including staff management and at least two years' experience of an OS/3 system environment. Stirling salary will be related to age and experience.

Requests for application forms should be addressed to the Personnel Officer, The Law Society, Greenacre House, 12 Roger Street, London WC1N 2JL.

(18726)

TECHNICAL
SOFTWARE/PROGRAMMING

Salary £9,000-£11,000

Our client is in the forefront of computer technology and is among the leaders in this field of advanced engineering applications.

Here is an opportunity for you to help expand the frontiers of new technologies. A number of exciting vacancies exist for Software Engineers/Programmers at various levels, who are keen to take this important step forward.

Ideally, applicants should be graduates in Computer Science, Mathematics or a relevant subject, with at least two years' experience in engineering applications on IBM mainframe machines using FORTRAN/ISO SFP.

This well-established company offers excellent prospects. Relocation expenses will be paid where appropriate.

Write or telephone for an application form quoting reference 20/5F.

EAST LOTHIAN DISTRICT COUNCIL
Department of FinanceCOMPUTER
MANAGER

(Salary £11,262-£12,117)

Early in 1984 the district council will upgrade their existing computer facilities with the installation of a 386/250 system. A number of financial applications are already on computer and it is intended to develop a full range of financial applications in the near future.

The new post of Computer Manager will be responsible to the Director of Finance for advising on the planning, development and implementation of all applications, working closely with various council departments, together with control of the existing computer operations.

Applicants should have had around three years' programming experience, preferably in PL/1, and at least two years' experience in a systems development environment, together with a good knowledge of financial applications.

The successful candidate will be required to have proven ability to communicate with staff of staff and user departments. They will also be responsible for the control of the computer operations.

Applicants should send their curriculum vitae to the Personnel Officer, Council Offices, 100 High Street, Edinburgh EH1 1JF, by 15th November 1983. Closing date for applications is 22nd November 1983. Successful candidates will be invited for an interview.

(18731)

SALES BIT

Quality of Management - 74

How to make
an appointment
by telephone

MAKING appointments is an essential part of any salesman's life, no matter what his product, and while someone selling supercomputers has less involvement in fixing sales calls than the typical computer supplies salesman, the need for effective skills in securing appointments to meet decision makers and decision influencers is of equal importance to any type of salesperson operating within any marketplace.

Many salespeople experience difficulties in securing appointments, which usually means they have trouble with their use of the telephone. In most cases this is due to insufficient self-confidence and the absence of an effective technique when attempting to gain commitment over the telephone.

When telephoning to secure an interview with a prospective buyer it is essential to sell the appointment, not the product. Some would argue that the same call can be used for qualifying the potential of the prospect, but I disagree. In most cases it is possible to qualify the potential of a company by means other than via the decision maker (the telephone operator, trade directories, etc.) so why run the risk of being drawn into the sterile situation of attempting to sell or describe an unseen product to someone you do not know.

All you need to discuss over the telephone is which day and at what time a meeting can take place. Don't get drawn into providing product information once the buyer has agreed to make an appointment. There is no better way of having an appointment cancelled almost as soon as it is made.

A considerable factor in the buyer's willingness to see the salesman is curiosity. Once this has been even partially satisfied by verbal description he is likely to change his mind.

So you are actually calling to close a sale, i.e. selling the appointment. Therefore, you are in a sales mode which means you must work to a pre-determined plan, work efficiently, chase the sale and ring off.

A planned presentation is most important. It must contain an opening statement that will gain the buyer's attention: "Good morning Mr Prospect. My name is John Salesman of Ideal Computer Supplies. Your group managing director suggested I make contact with you."

This must be followed by a justification for the proposed meeting: "We have been able to reduce the expenditure on computer consumables for many similar clients to yourself by as much as 50%, and I would like to come and discuss the ways we could do the same for you."

Then comes the request for an appointment (of which, more later) and a terminating statement such as "Goodbye".

Brevity is the key. Once a time and place has been agreed the call should be concluded immediately. Efficient organisation is absolutely essential. Simply locating a name in a directory is an ineffective and risky business. Lists should be compiled according to geographic location to allow efficient journey planning. Other information such as name of contact, telephone number, most likely area of products interest, possible application areas, etc. can make the process much easier to control and also provides a useful list for future reference.

So much for organisation; now back to the call itself. Having made an opening statement that is likely to gain the buyer's attention and justified the reason for meeting, it is necessary to gain his

agreement. This is usually achieved by the use of an open choice - the offer of alternative that ensure acceptance.

"I was hoping to be able to see you next week, or would you prefer for the following week?"

"Fine. Which is easiest for you: the beginning or end of the week?"

"No problem. Shall we make it Thursday or Friday?"

"A.m. or p.m.?"

"Straight after lunch or at the end of the day?"

"What about 2.30pm?"

"I look forward to meeting you then. Goodbye."

It's up to you to decide how to follow the optional path you wish to go. It would be naive to assume the telephone prospecting will not meet with any resistance if an effective selling technique is applied. There is sales resistance throughout the selling cycle and the salesman has to be ready for it at all times. Often it is justified because the product is what is inappropriate. But sales resistance occurs more frequently because the sales approach is entirely wrong and/or the salesman does not have the right answers when objections are raised.

I don't want to get into a debate about the validity of sales objections; but it must always be remembered that so-called sales objections are usually requests for more information.

Therefore it makes a lot of sense to list all the usual, and even the not so usual, objections together with replies that have been proved by experience to provide a satisfactory answer to the questions of potential buyers while at the same time sustaining their interest.

Whatever happens, objections cannot be ignored whether they occur over the telephone or face-to-face. They must either be answered, or at least set aside: "This is a very important point that I must without exception raise with our existing users when we first contacted them. It is a question that demands a detailed explanation which I will certainly want to give you when we meet."

This must be followed by another attempt then to close the sale of the appointment. After you have got the order, offer your thanks and say goodbye in no more than 10 seconds.

A further consideration that applies to most selling situations is the use of a well conceived, concise letter either to prepare the prospect for the call or to confirm the date, time and place of the appointment that has been made. I believe it does a lot for the professional credibility of the caller and increases his chances of gaining the buyer's agreement to meet.

Alan Williams

PUZZLE
ANSWER

WE know that the car is travelling at 15 miles per hour. It is the constant speed of the patch rider, he will overtake the car at a rate of (x-15) mph and pass it on the way back at a rate of (x+15) mph.

He takes one-tenth of an hour for the two journeys, so we can set up the equation

$$\frac{2}{x-15} + \frac{2}{x+15} = \frac{1}{10}$$

which gives us $x^2 - 40x - 225 = 0$ or $(x-45)(x+5) = 0$. Therefore the patch rider's speed must be 45 mph.

Throughput/Analysed
c £8,500

Based in a beautiful area of rural Staffordshire, we are a highly successful Construction Group. So successful that in the last three years we have increased our turnover from £20m to £50m despite the recession in the industry.

We have always regarded computer based information systems as a vital component of our achievements to date and of our future development, and currently utilise a DEC PDP 11/34 with DIBOL programs operating under RSTS/E.

Because of the proposed expansion in both hardware and software, we now wish to recruit a Programmer/Analyst, probably in his/her mid to late 20's with experience of programming in an interactive language (BASIC would be ideal, but is not essential). Previous exposure to micros would be a distinct advantage, as would a knowledge of the construction industry.

We offer genuine prospects of advancement in a Company that is determined not to stand still. We fully intend to maintain and even improve our position in the industry.

For an immediate and confidential interview, please contact Jim Mitchell on 021-236 3781 (24 hour answering service) or 021-455 7653 (evenings and weekends to 9.00 p.m.).

PRODUCT
SUPPORT ENGINEERS
Microcomputers

to £10,500 plus car Warwickshire based

Our Client, a major Computer Services Group, encompassing mainframe leasing, data processing, and microcomputer services, can demonstrate profitability, planned growth and an excellent record of service to its customers.

The introduction of the IBM PC, together with exclusive distributorship for key plug compatible IBM PC products, has made a significant contribution to an annual turnover in excess of £18 million.

Two Support Engineers are now required to operate out of new offices to provide pre- and post-sales technical support to distributors and their customers.

This role is best suited to an Electronics Technician with sound micro hardware and software experience who wishes to work in a dynamic sales environment. A Degree in computing/electronics or a relevant HND is desirable; this is not as important as sound practical experience and the ability to communicate effectively with non-technical personnel.

We can offer you an attractive income, and good career prospects in a dramatically expanding environment.

For further information, telephone Trevor Money on 021-236 3781 (24 hour answering service) or 021-448 1870 (evenings and weekends).
